Name and Title of Authorized Recipient Representative VIJAYA RANGARI Interim Associate VP for Research	Signature  Digitally signed by Vijay DN: cn=Vijay, o=Tuskegee university, ou=MSE, email=vrangari@tuskegee.edu, c=US Date: 2023.09.27 12:32:58 -05'00'	Date 9/27/2023

NONDISCRIMINATION STATEMENT

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotope, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, SW., Washington, DC 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

PRIVACY ACT STATEMENT

The above statements are made in accordance with the Privacy Act of 1974 (5 U.S.C. Section 522a).

Statement of Work

Purpose

The purpose of this agreement, between the U.S. Department of Agriculture, Natural Resources Conservation Service (NRCS), and Tuskegee University is to build markets for climate-smart commodities and invest in America's climate-smart producers to strengthen U.S. rural and agricultural communities.

Objectives

The objectives of this project are to support the production and marketing of climate-smart commodities by providing voluntary incentives to producers and landowners, including early adopters, to implement climate-smart agricultural production practices, activities, and systems on working lands; measure/quantify, monitor and verify the carbon and greenhouse gas (GHG) benefits associated with those practices; and develop markets and promote the resulting climate-smart commodities.

Budget Narrative

The official budget summarized below and described in the attached Budget Narrative will be considered the total budget as last approved by the Federal awarding agency for this award.

Amounts included in this budget narrative are estimates. Reimbursement or advance liquidations will be based on actual expenditures, not to exceed the amount obligated.

TOTAL BUDGET \$4,081,137

TOTAL FEDERAL FUNDS \$4,081,137

PERSONNEL \$507,940

FRINGE BENEFITS \$126,985

TRAVEL \$37,965

EQUIPMENT \$294,482

SUPPLIES \$119,645

CONTRACTUAL \$0

CONSTRUCTION \$0

OTHER \$2,745,894 (includes PRODUCER INCENTIVES \$1,006,267)

TOTAL DIRECT COSTS \$3,832,911

INDIRECT COSTS \$248,226

TOTAL NON-FEDERAL FUNDS \$0

PERSONNEL \$0

FRINGE BENEFITS \$0

TRAVEL \$0

EQUIPMENT \$0

SUPPLIES \$0

CONTRACTUAL \$0

CONSTRUCTION \$0

OTHER \$0 (includes PRODUCER INCENTIVES \$0)

TOTAL DIRECT COSTS \$0

INDIRECT COSTS \$0

Recipient has an approved Negotiated Indirect Cost Rate Agreement (NICRA) with a rate of 27.4% and base of modified total direct costs (\$905,935), consisting of all direct salaries and wages, applicable fringe benefits, materials and supplies, services, travel and up to the first \$25,000 of each subaward (regardless of the period of performance of the subawards under the award). Modified total direct costs shall exclude equipment, capital expenditures, charges for patient care, rental costs, tuition remission, scholarships and fellowships, participant support costs and the portion of each subaward in excess of \$25,000.

When equipment is purchased with Federal funds it must be used until no longer needed as described in the General Terms and Conditions and 2 CFR 200. If the residual value of the equipment is \$5,000 or more at the time it is no longer needed, the recipient must request disposition instructions. The disposition instructions may direct the recipient to: 1) sell the equipment and return a proportionate share of the proceeds to the Federal agency; 2) transfer title to another eligible entity identified by the Federal agency; or 3) keep the equipment if desired and compensate the Federal agency

for its proportionate share of the value

Responsibilities of the Parties:

If inconsistencies arise between the language in this Statement of Work (SOW) and the General Terms and Conditions attached to the agreement, the language in this SOW takes precedence.

RECIPIENT RESPONSIBILITIES

Perform the work and produce the deliverables as outlined in this Statement of Work and attachments.

Ensure Paperwork Reduction Act (PRA) clearance is obtained prior to conducting data collection from producers or other project participants, including data collection performed by subrecipients.

Comply with the applicable version of the General Terms and Conditions.

Submit reports and payment requests to the ezFedGrants system as outlined in the applicable version of the General Terms and Conditions. Reporting frequency is as follows:

Performance Reports: Quarterly

SF425 Financial Reports: Quarterly

Detailed Progress Report: Quarterly

(The detailed progress report is in addition to the performance and financial reports referenced above and described in the general terms and conditions)

Expected Accomplishments and Deliverables

See attached Benchmarks Table and associated Project Narrative.

Resources Required

See the Responsibilities of the Parties section for required resources, if applicable.

Milestones

See attached Benchmarks Table and associated Project Narrative.

GENERAL TERMS AND CONDITIONS

Please reference the below link(s) for the General Terms and Conditions pertaining to this award:

12	Mr. Abdul Seraaj	Phillips-McDonald Hickory Bend (PMHB) family farm	AL
13	Mr. Bob Bucholz	Bob Bucholz rancher	TX

List of underserved/minority-focused project partners:

We will recruit 23 producers including 20 underserved minority producers that will targeting total working lands from 2,500 acres with 4,400 sheep and 4,400 goats involved. We have only 17 committed at this point, but we will do additional outreach and recruit activities (including farmers conferences, training, or other activities [pasture work and hay rides]) to get the additional 6 underserved minority producers.

C. The compelling need for the project

Climate change stands a significant risk to agriculture, forests, and grasslands across the United States and the communities that support and depend upon them. With variation at local, regional, and continental scales, climate change is projected to impact livestock production by reducing the quantity and quality of pasture and forage, lowering the yield of feed grain, affecting livestock health, and fostering the spread and resilience of pathogens and parasites that affect livestock industries and commodities. This risk is markedly high for disadvantaged communities, including Tribal nations and low-income and minority communities. Profitable opportunities in the Southeast for limited-resource farmers, primarily sheep and goat producers, are challenging to identify. In addition, the soils of this region are often seriously depleted of nutrients and unproductive. To maximize economic return, it is essential to maximize return per acre. In addition, the soils of this region are often seriously depleted of nutrients and unproductive. The major agricultural greenhouse gas (GHG) emissions are related to soil and land preparation (>50%), ruminant animals (>25%),

manure fermentation (12%), and others (EPA, 2022). To be sustainable, agriculture production must serve climate-smart (CS) practices that can mitigate climate change by increasing soil carbon sequestration (SCS) and reducing GHG emissions. Steps to reduce the susceptibility of climate change and increase the adaptive capacity of Southeast American farmers, ranchers, forest owners, and other stakeholders to climate change are needed to maintain competitiveness and sustainability in the coming decades. This proposal will increase the resilience of agriculture, forest sectors, and communities to climate variation through climate change adaptation planning.

The GHG emissions can be mitigated by 1) improving soil health (reducing emissions, and enhancing SCS), 2) enhancing nitrogen (N) management (implementing the 4Rs (right source, right rate, right time, and right place) of N management and reducing nitrous oxide, a potent GHG, 3) improving feed efficiency and livestock management (reducing potent methane emissions from ruminant and manure), 4) improving grazing and pasture management (adding legume cover crops and climate resistant forages to minimize N fertilizer and irrigation system, respectively), 5) improving agroforestry practices (building carbon stocks in perennial biomass and soils), and 6) adding bioactive feed additives to promoting rumen fermentation and increasing average daily gain. This can serve as CS practices and complement our effort to improve CS livestock production system and agricultural commodities practices while enhancing SCS in Southern USA.

D. Approach to minimize transaction costs associated with project activities

The project plans to organize several vendors to get the lowest possible price and negotiate for any cost reduction or wholesale price while procuring supplies, equipment, and other items. We will hire one project manager to keep track of CS activities to manage better and estimate when we purchase or rent equipment, materials, parts, or anything needed for our projects. The project manager can also organize all the actions and strategies related to the CS practices, evaluating and selecting suppliers to test quality and other activities (e.g., vendor quotes). Quotes from the most competitive vendors will be chosen to procure required items and pay for services. The project group and accompanying staff will be mindful of CS strategies and use them in all project-related transactions. In addition, the rules of the collaborating institutions procuring any project-related items or do any project-related transactions. The tax-exempt status of the collaborating universities will be used in all transactions. We will work closely with market development partners, including the Mississippi State University (MSU), Phillips-McDonald Hickory Bend (PMHB) family farm, Widget Development & Trading Company (WDTC; as a consultant), **Bob Bucholz rancher**, and surrounding ethnic and local markets to create a high-value demand for the low-CH₄ sheep and goat meat from our pilot producers.

E. Approach to reducing producer barriers to implementing CSAF practices to market climate-smart commodities

Sheep and goat producers lack organized product markets; most sell their animals at local auctions. Lack of competitiveness in the local goat markets results in producers receiving low animal prices (Table 1). Therefore, besides GHG reductions, CS commodities in the southeast regions must increase food production and enhance marketing approaches. The next barrier we will break down for our producers is market creation. We will connect small, underserved, and mid-to-large producers by mobile processing units (MSU and TU) and marketing system to sell low-CH₄ sheep and goat meats to brands and value-added willing to pay a premium for sustainable animal products. This mobile processing and marketing system will support the local and farm-direct meat production pipeline in a climate-conscious manner.

Table 1. Producer barriers to implementing CSAF practices to market climate-smart commodities

User	Barrier to Adoption	Marketing partners	Outcomes
------	---------------------	--------------------	----------

Sheep producers	Cost of raising animals. Feed efficiency — slow weight gain. Difficult to access USDA-proof meat processing plants for sheep and goats.	MSU, PMHB family Farm, Bob Bucholz rancher, WDTC; 23 minority producers	Improved meat quality, animal health, and the environment. Value-added products. Economic benefits for participating producers.
Goat producers	Competing with imported products from Australia. Animal health (internal parasites control is a major issue).	MSU, PMHB family Farm, Bob Bucholz rancher, WDTC, 23 minority producers	Improved meat quality, animal health, and the environment. Value-added products. Economic benefits for participating producers.

PMHB = Phillips-McDonald Hickory Bend Family Farm; Widget Development & Trading Company (WDTC).

F. Geographic Focus

Numerous partnerships and collaborative efforts are of paramount importance to this project. The primary focus is Southern USA (Alabama, Mississippi State, Texas, Georgia, and Oklahoma) are the primary focus. Please see the section E (Climate boundary project site including Oklahoma, Mississippi, and Alabama States). However, stated states will not inhibit producers and landowners from other states in these regions from contributing to the project if funding are available.

G. Project management capacity of partners, including a description of existing relationship with and/or prior experience working with producers or land owners, promoting climate-smart activities and marketing climate-smart.

The project team involves 1890 historically black college university (HBCU) members, who have strong relationships with underserved minority producers and landowners in the Southern USA. Our Monitoring, Measurement, Reporting, and Verification (MMRV) partners include leading agricultural research institutions, including MSU, LU, AAMU, the Federation of Southern Cooperatives/Land Assistance Fund (FSC/LAF), and minority producers have long been working experiences and able to promoting CS activities and marketing CS practices. Our market development partners will support this project, including the MSU, MS, the PMHB family farm, AL, WDTC, Bob Bucholz rancher, TX, and other surrounding markets. Numerous other funded projects (carcass evaluation [MSU], mitigation of GHG emissions from ruminants [LU], and sustainable small ruminant production (Fort-valley State University, GA) established by every team member as a PI and/or CO-PI had extension objectives that involved working with underserved minority producers and landowners, and on-farm activities.

Dr. Byeng R. Min has been leading innovative research and outreach work in alternative internal parasite control strategies in grazing ruminants, year-round grazing management, sustainable pasture-based small ruminant production systems, and an integrated approach to mitigating GHG emissions from ruminant animals for over a decade of studies have proven that integrated trees, shrubs, and forage systems can provide sustainable vegetation management practices and reduce the environmental impacts from grazing lands/woodland and pine agroforestry systems; effects of goats on soil ecosystems, soil organic matter; farmer demonstrations and education on appropriate technology for the development of a decision aid system to assist landowners in managing forested lands in an economically and environmentally sound manner; and the economic potential of the proposed methods in the Southeast. However, further evidence

is required to substantiate these claims. Therefore, we propose quantifying enteric methane (CH₄) emissions and carbon sequestration from open pasture and agroforestry grazed (NRCS E340B) by sheep and goats without or with bio-active compound-containing (e.g., natural tannins) supplementation. Our project teams have proven that tannin-containing diets or supplementation improved animal performance, animal health, rumen fermentation profiles, and modified rumen microbial activities but reduced GHG emissions in ruminants (beef and meat goats) due to the inhibiting methanogens activities by 15-50% (NRCS code E528A; Puchala et al., 2005; Min et al. 2006; 2014a, b; 2015a, b; 2019 a,b,c,d; 2021a). While not a direct enteric CH₄ mitigation strategy, SCS has received increasing attention as a potential climate change mitigator, with ruminant livestock playing a role as grazers. (Fargione et al., 2018; Bossio et al., 2020).

In addition, a series of year-round grazing approaches had been conducted at the George Washington Carver Agricultural Experiment Station in Tuskegee University (TU) to develop and demonstrate a profitable and sustainable year-round forage-based production system with sunn hemp (*Crotalaria juncea* L.), forage, soybean (*Glycine max*), or bermudagrass (*Cynodon dactylon*) system in the summer-fall period, and annual ryegrass or ryegrass + legumes (Australian pea, berseem clover, and hairy vetch) pastures in the winter for goat production for the Southeastern US during the last five years. Our results have proven that animals on sunn hemp (as a summer forage) or ryegrass + berseem clover combination (as a winter forage) grew 18-44% faster and reached the expected slaughter weight in less time and improved forage production over the summer drought periods when compared to bermudagrass or ryegrass pasture systems, respectively (Min et al., 2016, 2018, 2019b). Therefore, we feel that using proper legume forages for winter grazing followed by summer forages and proven bio-active compound-containing supplementation/or bio-active compound-containing forage legumes can provide a profitable year-round foraging system and climate-resilience forages.

ii. A plan to pilot climate-smart agriculture and/or forestry practices on a large scale, including:

A. A description of CSAF practice to be deployed.

This project focuses on forage-based CS practices (NRCS 340B; 340H; E528E; E528G) such as proper legume forages for winter grazing followed by summer cover crops, climate-resilience forages (e.g., different photosynthetic pathways; C4, warm-season and C3, cool-season), and agroforestry systems (NRCS E381A). Combining forages such as sunn hemp and a climate-resilience forage will also be deployed to increase protein output and SCS and restore N in the soil. In addition, we will work with underserved minority producers to conduct an agroforestry system without or with novel tannin-rich feed supplementation (NRCS E528A) and year-round grazing systems on GHG emissions (CH₄, CO₂, and N₂O) from the animals and pasture/forestry grasslands forage nutrients changes, animal performance, soil fertility, and carbon sequestration on the farms (NRCS E528S). We will use the MMRV progress made during these pilots during the MMRV innovation. Our pilots will begin in Southern USA (AL, MS, GA, and TX) simultaneously, where pilots and market development will benefit and promote the state's agriculture industry and a shift to a more diverse economy.

B. Plan to recruit producers and landowners, including estimated scale of the project (e.g., number of landowners, acres targeted, head of livestock, etc.).

Recruitment of underserved minority producers for future pilots will continue to prioritize underserved groups. We will recruit 23 producers including 20 underserved minority producers that will targeting a total working land from 2,500 acres with 4,400 sheep and 4,400 goats involved. We only have 17 committed at this point, but we will do additional outreach and recruit activities (including farmers conferences, training, or other activities [pasture work and hay rides]) to get the additional 6 producers.

To recruit underserved and small producers, Tuskegee University has a strong relationship with others, including LU, AAMU, Fort-valley State University, etc., to outreach minority producers and minority-serving groups in the industry has led to the recruitment of small producers, ensuring that over 90% of our pilots are with underserved and small producers. In addition, Tuskegee University (PI) is bringing together an alliance of producers, landowners, research institutions, CH₄ measurement companies, and market

development partners to bring premium *climate-neutral* (net-zero addition) *meats* (lambs, mutton, and Chevon [goat meat]) to market at scale in the US in the next five years. We will partner with more than 23 pilot minority farmers, two mid-to-large producers, and one demonstration farm at the MSU, MS. However, the broad grouping of historically underserved producers includes “socially disadvantaged,” “limited resources,” veteran farmers and ranchers, and small producers (< \$250,000/annual income) will be recruited for an essential pillar of this project.

C. Plan to provide technical assistance, outreach, and training, including who will be conducting these activities, qualifications and projected time line

The Roadmap of major plans, technical assistance, and training plans are presented in Tables 2 and 3, respectively. We expect that the implementation of CS practice will begin as soon as the beginning of Quarter 3, year 1, and continue thereafter until completed.

Table 2. Roadmap of significant plans across the 5-year project

	Yr 1				Yr 2				Yr 3				Yr 4				Yr 5			
Activity	Q 1	Q 2	Q 3	Q 4	Q 5	Q 6	Q 7	Q 8	Q 9	Q1 0	Q1 1	Q1 2	Q1 3	Q1 4	Q1 5	Q1 6	Q1 7	Q1 8	Q1 9	Q2 0
Award																				
Project kickoff meeting																				
MMRV innovation plan and initiating CS practices																				
Objectives 1 to 3																				
Establish CS forages/initial soil samples/ methane sensors test & evaluation.																				
Initiation & conduct of on-& in-farm activities																				
Record keeping and data analysis																				
Establish/conduct mobile processing and marketing for CS commodities.																				
Training, education, outreach, & technical support for CS commodities																				
On-site demonstration, farm budget analysis, and customer-based																				

marketing																				
Grazing study continues to be associated with GHG and SCS.																				
Objectives 4 to 5																				
GHG measurement, SCS, and MMRV																				
Develop marketing for CS commodities.																				
<i>Summarize/finalize</i>																				
Final report																				
Q1 = October - December; Q2 = January - March; Q3 = April - June; Q4 = July - September.																				
CS= climate smart; GHG= greenhouse gas; MMRV = Monitoring, measurement, reporting, and verification; SCS = soil carbon sequestration;																				

Table 4. Plane to provide technical assistance, outreach, and training

Item	Name	Institution	Roles and responsibilities
PD	Dr. Byeng Ryel Min	TU	Overall project management; interaction with Stakeholder Advisory Group. Coordination of project activities, conduct the mandatory subaward oversight, audits, financial reporting, CPA-52s for all participating producers and MMRV uploads into COMET-Planner and other activities
CO-PD	Dr. Rios de Alvarez	MSU	Evaluation of on-farm pilot activities & commodities marketing. Training for producers and students
CO-PD	Dr. Derris Burnett	MSU	Evaluation of CS carcass traits to support the premium and value-added market entry, mobile slaughtering activity . Training for producers and students.
CO-PD	Dr. Gamal Abdelrahim	AAMU	Evaluation of on-farm pilot activities and CS commodities marketing
CO-PD	Dr. Nar Gurung	TU	Coordination of project activities, research publications, and report preparation
CO-PD	Dr. Frank Abrahamson	TU	Management of on-farm activities and marketing activities
CO-PD	Dr. Sandra Solaiman	TU	Coordination of project activities and marketing activities
CO-PD	Dr. Raymon Shange	TU.	Management of soil properties, selection decisions, and information dissemination to producers
CO-PD	Dr. Richard Puchala	LU	Evaluation and validation of portable sensors compared to respiration chamber and GreenFeed systems
CO-PD	Dr. Rui Chen	TU	Evaluate economic, data analysis, and management considerations
CO-PD	Mr. Alphonso Elliott	TU	Management of on-farm activities and marketing activities

CS = climate-smart; TU=Tuskegee University; MSU = Mississippi State University; AAMU = Alabama A & M University; LU = Langston University.

D. Plan to provide financial assistance for producers/land owners to implement CSAF practices.

During the project lift time, an average estimated financial support would be \$500/acre; however, it may vary depending on various producers' farm situations, including farmland conditions, machinery, costs for renting equipment, etc. At least 23 producers will receive \$500 per acre over the five years. Each applicant producer may be eligible for financial assistance for fulfilling CS practices up to 50 acres. The monetary fund would be used to pay for mandatory participation and practices, including fertilizer application, planting materials (forage seeds, feed additives), cross-fencing materials, watering facilities, mobile shelters, rental or contractual services for land preparations, and other items associated with the installation of the pilot CS practices.

E. Plan to enroll underserved and small producers, including estimated number of underserved and small producers participating and associated dollar amounts anticipated to go directly to producers, in the form of technical and financial assistance.

The aspect of enrolling producers has been presented under (ii) B. All producers and landowners will be registered in this project for CS practices will under-served minority producers. It is estimated that, on average, each participant will receive financial incentives of \$500/acre for up to 50 acres in terms of CS

practices, equivalent to \$25,000 per farm, but the extremely large producer (>10,000 acres) will receive up to 500 acres. In addition, funds are requested to cover market developments and installation of the pilot CS practices. Other supplies include animal weighing balance to monitor liveweight change, supplemental feeds and feeders, and drinkers.

iii. A measurement/quantification, monitoring, reporting, and verification plan (MRVP).

A. Approach to greenhouse gas benefit quantification, including methodology approach consistent with the section titled "Quantification Requirements" below:

We will test and quantification of all existing CH₄ measurement technologies for sheep and goat production systems against the industry standard GreenFeed machine and Respiration Chamber systems to identify a technology that is accurate, affordable, and time-efficient enough for small producers, including minority producers. For practical applications (on-farm) or where more detailed input data and resources are available, simple and hands-on CH₄ measurement techniques are needed to use enteric CH₄ emissions at on-farm practices. The selected CH₄ sensors will be used as follow: 1) *Portable laser CH₄ detector*, 2) *Infrared CH₄ detector*, 3) *Tin oxide [MQ-4] semiconductor CH₄ sensors*, and 4) *Semiconductor CH₄ sensors*.

A1. Approach to greenhouse gas benefit quantification from ruminants using a respiration chamber system (Dr. Puchala, LU, OK; Yr. 2023-2024): The indirect open-circuit respiration calorimetry system will be used to validate alternative new methods. The respiration chamber system has four head-boxes (Sable Systems International, Las Vegas, NV, USA), allowing simultaneous gas exchange measurements on four animals (2 sheep and 2 goats each time). During the experimental period, animals will be fed diets in equal portions at 08:00 and 15:00 h and have free access to water and trace mineralized salt blocks. The experiment will last for 32 days, with 24 days (24-d) for adaptation and eight days (8-d) for measurements. On the first day of the collection period, termed day 1, all animals will be fed an experimental diet (forage-based diet; 60% forage). Enteric CH₄, CO₂ emission, and O₂ consumption will be measured throughout the 8-d periods. At the end of the experimental period, rumen fluid samples will be taken (50 mL) using a stomach tube for rumen fermentation profiles, pH, and methanogen community diversity analysis. At the same time (last 8-d), four portable CH₄ detection devices will be applied to measure enteric CH₄ emissions from the animals.

A2. Approach to greenhouse gas benefit quantification from ruminants using a GreenFeed system (Dr. Min, TU, AL; Yr. 2023-2024): An equal number of animals (4 sheep and 4 goats per treatment) will be randomly allocated by initial body weight to one of two grazing experimental treatments (high forage allowance [1.5 kg dry matter intake [DMI]/animal/day] vs. low-forage allowance [1.0 kg DMI/animal/day]). Animals will be grazed on wheat and rye grass-dominated pastures to measure the CH₄ emissions rate. Throughout the grazing period, animals will have limited access to 1 of 2 GreenFeed systems that record enteric CH₄ emissions from each animal. At the same time, four selected portable CH₄ detection devices will be applied to measure enteric CH₄ emissions from the animals three times periods in the early (day 0-10), intermediate (day 50-60), and final stages of the experimental periods (day 100-110; Hristov et al., 2015). Methane and CO₂ gas-sensing device sensors will be assembled following calibration with certified gases and tested to compare with GreenFeed systems simultaneously over three different periods.

B. Approach to the monitoring of practice implementation, including the anticipated number of farms and acres reached through project activities.

B1. Use of goats co-grazing with sheep in a climate-resilient multi-species pasture in pine agroforestry systems for enhanced pastureland forage, soil quality, GHG emissions, and soil organic carbon (SOC) pools compared to conventional pasture (open grazing system; MSU): Two farms (one in north MS and one in South MS) will be selected to test goat and sheep production in agroforestry vs. traditional grazing systems. *Establishing the agroforestry:* woods will be partially cleared to plant grasses and legumes

according to the region and soil type. Both traditional grazing or control (C) and agroforestry (A) systems will be fenced to have rotations available for all treatments. *Animals & treatments:* grazing of both C and A systems will be compared using 2 different animal species in 3 arrangements: goats (G, n=12), sheep (A, n=12), and co-grazing (GA, n=6+6), for a total of 18 sheep and 18 goats in six combinations (CG, CA, CGA, AG, AA, AGA). Duration of each experiment: 6 months per year from years 2 to 4. *Measurements:* Weight of the animals, FAMACHA, fecal egg counts, and body condition score will be evaluated weekly. *At the start and end of the CS practices:* plant species present in each system and preference of plant species, weather changes (e.g., temperature), soil quality, soil GHG emissions, and SOC (similar to 1.1.4) will be measured. *At the slaughter of the animals:* All the harvested animals (218 sheep and goats) will be used to enter the supply-chain and be marketed for CS commodities. General carcass traits (carcass weight, dressing percentage, and meat color etc.) comparisons by treatments will be conducted. Portable climate stations (the best CH₄ detector selected from previous experiment) will be used in each treatment. Variables (temperature, humidity, radiation, and wind speed) will be correlated to animal performance, carcass traits, rumen methanogen diversity, and enteric CH₄ emissions. Each producer will keep being keeping records of the costs incurred for input costs for economic analysis. All the animals will be transferred to the meat lab at MSU to determine carcass yield and meat quality. These carcasses will be used for marketing approaches.

B2. Compare three different supplementary feeding strategies for quantifying enteric methane emissions, animal performance, and sustainable goat production system in the mix-wooded forage system (TU, MSU): An overwintering on-farm pilot trial will be conducted in Texas. One large farmer cooperator (Bob Bucholz, Eldorado, TX, 50,000 ac available to graze with 1,500 sheep and 3,000 goats) will participate in this project for five years. The treatments are given below. The supplements (tannin-rich peanut skin [20% as-fed], plant tannin-rich sericea lespedeza pellet [20% as-fed], and no-tannin alfalfa pellet [20% as-fed as a control] will be provided. Hay will be provided free choice while supplements are fed at 1% body weight. Six hundred growing meat goats (Boer-cross) will be randomly assigned to three treatments (200 goats/treatment; 2 replicates [100 goats/replicate]), and whole herd productivity will be measured. Variables to be measured include body weight change, body condition score change, FAMACHA scores, enteric CH₄ emissions, soil nutrients profiles, soil GHG emissions, soil carbon sequestration, costs of feeding, pasture growth, fecal egg counts, and forage biomass production. Soil carbon sequestration and soil tests will be conducted before and after the completion of the pilot study. The producer will keep records of the costs incurred for inputs. Six hundred meat goats and sheep per year (total 2,400 animals) will be harvested using an FSIS-inspected "mobile slaughter unit" (Dr. Burnett, MSU and TU). Among the 2,400 animals, 2,300 animals will enter the supply chain and market development and 100 animals will be utilized for CS research purposes. Other remaining animals (2,400) will be utilized for breeding purposes.

B3. Evaluate animal health, performance, carcass quality, and enteric CH₄ emissions of sheep and goat species when climate-resilience grasses/legumes are incorporated into the grazing system, and grasses/forbs in combination with conventional pasture system.

B3.1. Evaluate climate-resilient forages on animal performance and greenhouse gas (GHG) emissions (TU and MSU).

Climate-resilient forage and GHG emissions: This five-year study will be conducted across two locations in Alabama (North and South) with distinctive soils. The pilot on-farm practice will be a randomized complete block replicated three times. The treatment will include different cool-season and warm-season forage species. The cool-season annual forages will consist of five types of grass (annual ryegrass, cereal rye, oat, triticale, and wheat) and eight annual clovers (alsike, balansa, ball, berseem, crimson, Persian, subterranean, and vetch). The warm-season annual forages will include six types of grass (crabgrass, brachiaria, pearl millet, sorghum-sudan, sudangrass, and teffgrass) and four legumes (cowpeas, lab-lab, sun hemp, Alyce clover). The perennial forages will include one cool-season grass (tall fescue), two warm-

season (bahiagrass and bermudagrass), and one legume (alfalfa). Soil samples will be collected before establishing each species to determine soil carbon stocks, organic matter, and nutrients. Once the forage treatments are established, gas emissions (CO_2 , CH_4 , and N_2O) will be taken every four weeks to determine losses for each system. Samples will be collected and analyzed using LI-7810 $\text{CH}_4/\text{CO}_2/\text{H}_2\text{O}$ and the LI-7820 $\text{N}_2\text{O}/\text{H}_2\text{O}$ Trace Gas Analyzers (Li-Cor, Lincoln, NE). The plots will be harvested for post-gas emissions to determine biomass and measure C and N partition. Leaf Area Index (LAI) will be calculated using a Li-Cor 2000 LAI (Li-Cor, Lincoln, NE), and the Normalized Vegetative Index will be measured with a GrenSeeker handheld sensor (Trimble, Sunnyvale, CA). Root samples will be collected at the end of the growing season for each forage species to determine C and N stocks in the root system. Soil samples will also be collected at a depth of six inches to measure changes in C stocks. All biomass will be ground to pass a 1-mm screen and analyzed for C and N content using an Elementar EL Cube C/N/S analyzer (Elementar Americas, Inc., Ronkonkoma, NY).

Climate-resilient forages, animal performance, and carcass traits: One hundred growing meat goats (Boer-cross; 5-6 months old) and 100 cross-breed sheep (5-6 months old) will be randomly assigned to two forage treatments and animal productivity and health will be measured 28-days intervals during 160 days periods. The variables measured include body weight change, body condition score change, FAMACHA scores, enteric CH_4 emissions, soil nutrients profiles, soil GHG emissions, and soil carbon sequestration. Animals will be grazing on cool-season grasses compared to annual clovers and on warm-season annual forages compared to one legume forage (alfalfa) at the Phillips-McDonald Hickory Bend (PMHB) Family Farm located at Pike Road, AL. At the end of the pilot study (160 days), 200 sheep and goats per year over the four years (total 800 sheep and goats) will be utilized for this project. Among 800 animals, 400 animals will be harvested using an FSIS-inspected "mobile slaughter unit" to enter the CS market development, 60 animals for CS research analysis, and remaining 340 animals will be utilized for breeding purposes.

B3.2. Evaluate the effect of C3 and C4 plant species on animal performance, enteric CH_4 emissions, soil fertility, gases emissions from the soils, and carcass traits in sheep and goats (TU, MSU, and AAMU): Twenty underserved minority producers will be selected to test goats and sheep's productive performance and GHG reduction in three different pilot systems. This four-year study will be conducted across two locations in Alabama (AL.) State (North [conduct by AAMU] and South [conduct by TU]) with distinctive soils to determine pasture quality changes using climate-resilience grasses/legumes (C3 vs. C4 forages) and grasses/legumes combined with a conventional pasture system.

Animals & Treatments: The grazing trial will use climate-resilient forages with grazing goats and sheep at 15 underserved farms in years 2 to 4.

- 1) **Climate resilient forages (C3 plants):** a mixture of soybean, buckwheat, sunflower, sunn hemp, and puna chicory: 12 goats (6-month-old age).
- 2) **Climate resilient forages (C3 plants):** a mixture of soybean, buckwheat, sunflower, sunn hemp, and puna chicory: 12 sheep (6-month-old age)
- 3) **Non-climate resilient forages (C4 plants):** a mixture of millet and sorghum (12 goats) (6-month-old age).
- 4) **Non-climate resilient forages (C4 plants):** a mixture of millet and sorghum (12 sheep) (6-month-old age).

Mixed seeds at 40 kg/ac will be drilled using a no-till drill approximately at a depth of 2.5 cm and 0.20 m row spacing.

Measurements: Weekly: weight of the animals, FAMACHA, fecal egg counts, and body condition score. At the start and end of the experiment: plant species present in each system and selectivity of plant species, weather changes (e.g., temperature), soil quality, GHG emissions, carbon sequestration, and soil organic carbon. Variables (temperature, humidity, radiation, rainfall, and wind speed) will be correlated to forage production, animal performance, animal health (fecal egg production), soil organic carbon, carbon sequestration, and enteric CH_4 emissions. Each producer kept records of the costs incurred for input costs for objective 4. Total four-hundred-eighty sheep and four-hundred-eighty goats will be harvested per year

over the four years using an FSIS-inspected "*mobile slaughter unit*. Among the 480 sheep and 480 goats, 40 sheep and 40 goats will be used CS-carass evaluation research (meat quality, meat color, fatty acids compositions etc.) and 440 sheep and 440 goats will be entered to development of CS commodities market.

B3.3. Conduct economic evaluations of the different feeding strategies and two different grazing management systems (integrated [trees, shrubs, and forage] system vs. conventional system) to assess their profitability and sustainability (TU, AAMU, LU, and MSU): Each producer will keep records. The records will include animal and pasture measures and input costs (e.g., veterinary items). We will provide ear tags, seeds, and veterinary items for all animals at the farms. The available forages and plant species will be sampled for lab analysis. Enterprise budgets will be prepared for each producer. Four critical tools will be used: enterprise budgets, partial budgets (cost-benefits analysis), marketing, and business plans. An enterprise budget estimates an enterprise's expected sales, expenses, and profit. The enterprise budget will address the following: gross returns, variable costs, gross returns above variable costs, fixed costs, total costs, net returns, and break-even analysis. Partial budgets will be prepared for the participant (demonstration site) producers. The added returns, reduced costs, added costs and reduced returns would be assessed. The net change will then be estimated to determine whether implementing agroforestry is worthwhile (i.e., whether farm income is increased or decreased).

C. Approach to reporting and tracking of greenhouse gas benefits including the anticipated GHG benefits per farm, per project, per commodity produced, per dollar expended, and the anticipated longevity of GHG benefits:

The economic advantage of carbon benefits and CS commodities is presented in Table 5. Overall, as a direct result of the market development efforts in this grant, sheep and goat producers will gain a \$54.6 premium per head of low-CH₄ sheep and goats, and producers will earn a \$5,460 compensation over the year of 100 flocks of low-CH₄ sheep and goats. As CS practices, integrated forage systems and agroforestry systems provide an opportunity for producing meat and milk with less GHG emissions. Feeding high-quality forages that include legume forages generally increases body weight gain and less GHG emissions (Min et al., 2021a). Adding legume forages enhances the diet quality and improves rumen fermentation, thereby reducing GHG emissions from ruminants (Min et al., 2019 a, b, c, d). In addition, GHG emissions from ruminants per unit of DMI can reduce GHG emissions by adding tannin-containing forages to the grazing system (Min et al., 2020). Furthermore, combining forages such as sunn hemp and a climate-resilience forage will increase protein output and SCS and restore N in the soil. For example, previous experiments have shown that under certain conditions, elevated CO₂ favors woody plants, herbaceous forbs, and legumes over many types of grass because of their different photosynthetic pathways (C4, warm-season versus C3, cool-season; Morgan et al., 2007) or possibly differences in root depth and groundwater uptake (Barron-Gafford et al., 2012). At the same time, other evidence suggests that C4 grasses may be favored in arid areas with reduced precipitation because of their extraordinary ability to resist desiccation, high temperatures, and low nitrogen levels (Esser, 1992). Therefore, this can serve as an alternative forage and complement our effort for a successful *climate-resilience year-round grazing system*. Selected project partners, including minority producers, will benefit from GHG mitigation and SCS from ongoing or new on-farm practices associated with producing CS commodities per farm and per dollar expended.

All the data generated from this project will generate a data dictionary from MS access and navigating/uploading database with COMET-planner. Data dictionaries provides detailed information about the contents of a dataset or database, such as the names of measured variables, their data types or formats, and text descriptions. Therefore, the first step is naming the project, selecting the state and county of the farm or ranch. Then, select the land use category from the options in "Steps 2 and 3". When the CPS is clicked on in the Conservation Practice Standard list, the definition of implantation will appear to the right. To select the CPS, click on the practice in the Conservation Practice Implementation Table. Multiple conservation practices can be selected by repeating "Step 2" and "Step"3 on the COMET-Planner tool. When all the CPS have been selected, move to Step 4 and enter the acreage for each one in the table. After

acreage is entered, values (negative [increased GHG emissions] or positive [reduced GHG emissions] values) will appear to the right in the Table. Values can see for CO₂, N₂O, and CH₄.

Table 5. Grazing approaches to quantify GHG benefits associated with climate-smart (CS) animal production.

Item	Integrated forage system	Climate resistant forages	Agroforestry system	Feed additives
Forage system	Grass-legume (70:40) ratio	C4 and C3 forages/legume forages	Tree + forages	Tannin-containing diets
Acres	300	300	500	1500
Animal (yrs. 2 & 3)	500 sheep/goats	500 sheep/goats	1,000 sheep/goats	1400 sheep/goats
Animal (yrs. 3 & 4)	500 sheep/goats	500 sheep/goats	1,000 sheep/goats	1400 sheep/goats
GHG benefits	2.8 to 8.0 t eCO ₂ /ha storage	5 to 8.0 t eCO ₂ /ha storage	8-10 t eCO ₂ /ha storage	5 to 8.0 t eCO ₂ /ha storage

Growing animals will be used.

D. Approach to verification of GHG benefits

D1. Transforming local livestock production system with climate-smart commodities and marketing:

The GHG benefits associated with implementing CS practices will be verified based on the results on SCS and GHG emissions over the project period. In addition, GHG benefits and transforming market place from producer's barrier to adaptation through market development partnerships with CS commodities is presented in Table 6 and estimates a significant improvement in the percent of the commodities market and ton eCO₂ (CO₂ equivalents, CO₂E) reduction annually in sheep (1028.5 metric tons) and goats (1589.5 metric tons) through this project model. The long-term GHG benefits will be estimated based on the amount of plant biomass production and resulting SCS.

Table 6. Transforming market place with climate-smart local sheep and goat commodities

User	Barrier to Adoption	Product Value	Partners	% of Market	Ton eCO ₂ reduction annually ¹
Sheep producers	Cost of raising animals/ slow weight gain	Differentiated, local product Lower costs. Improved animal health	MSU, PMHB family Farm, Bob Bucholz rancher, WDTC; minority producers	0.98% 550 of 29000 sheep sold in Alabama	1028.5 550 * (2.2 * 0.85)
Goat producers	Competing with imported products. Internal parasites control is a major issue.	Differentiated, local product Improved animal health	MSU, PMHB family Farm, Bob Bucholz rancher, WDTC, minority producers	0.98% 850 of 40,000 sold in the Alabama marketplace	1589.5 850 * (2.2 * 0.85)

PMHB = Phillips-McDonald Hickory Bend Family Farm; Widget Development & Trading Company (WDTC), consultant. eCO₂ = emitted CO₂. ¹This calculation does not include any greenhouse gases other than CO₂.

D1.1. Building a more resilient food supply chain that provides more and better market options for consumer and producers while reducing carbon pollution: The Phillips-McDonald Hickory Bend (PMHB) Family Farm will produce value-added sheep and goat meat products. The recent food supply chain disruptions have revealed that depends on capacity concentrated in a few geographic areas and requires many steps to get *from farm to fork*. In order to be more resilient, the food supply system of the future needs to be more distributed and local. Having more capacity to gather, process, move and store food in different geographic areas of the country will provide more options for producers to create value-added products and sell locally, which will support new economic opportunities in rural communities. Additional regional capacity will also give consumers more options to buy locally produced products—helping ensure food is available to consumers—and reduce the climate impact of our food supply chain.

Our plan of development is focused on the following goals:

1. Create an online value-added CS meat market that is customer-driven to ensure quality first and consumer input on product efficiency.
2. We plan to build strong relationships with local businesses, restaurants, and other consumers of CS-commodities throughout the southeastern region of the United States to sustain an open market for the CS meat products produced from the family farm.
3. We plan to offer on-site slaughtering and CS-meat processing of goats and sheep (FSIS-inspected *mobile slaughter unit*, Dr. Burnett, MSU and TU) and sell locally, which will support rural economy and reduce the climate impact of food supply chain. That is why our marketing framework includes programs to ensure all consumers are able to access fresh, healthy, nutritious food.
4. We also plan to market our CS-meat products to US Military Departments and establish CS-meat sources for significant food store chains in the surrounding areas. Overall, the PMHB family farm, once established as a CS-meat supplier for the community, has great potential to be an excellent source of partnerships for CS commodities.

D1.2. Adapting to CS market systems: Underserved minority producers and Bob Bucholz directly supplies CS-blended (e.g., Eco-friendly lamb, hogget, and mutton for sheep meat; Eco-friendly Capretto and Chevre for goat meat) meat products to the local market. After the pilot study, TU and MSU teams will work with minority producers and Bob Bucholz to ensure that the low-CH₄ goat and sheep meats produced are well-received by the local restaurant market. Minority producers are also interested in selling the low-CH₄ sheep and goats to regional markets (e.g., Atlanta, GA) and only goat meat at their restaurants. Thus market opportunity will be fully examined. We will create the CS-blended menus with local restaurant s owners and offer dinners free samples or taste-testing events for CS-blended sheep and goats meats. Run cross-product promotions on CS-meat dishes and selected drinks, side dishes, or desserts. We also allow dinners to add CS sheep and goats meats dish for a surcharge. We will provide chefs and food preparation staff with information about the health and environmental benefits of CS-meat products.

D1.3. Overall market approaches for training and educating underserved minority producers: Widget Development & Trading Company partner (WDTC; www.widgetdtc.com) is a product and program development firm that will work as a market development consultant for CS commodities. The WDTC has a track record of agricultural commodity logistics and developing value-added products within the state to sustain our local communities. The primary investigation and development of CS marketing approaches will include training farmers on raising goats, which includes their care and maintenance of the animal to develop substantial herds that include parasites and disease control, reproduction cycle of sheep and goats, farmer's business marketing, and sales plans. These plans will be important to teach producers about the various consumer markets. Certain consumers want sheep and goat meat at holidays and religious events.

Some ethnic and religious groups (Muslims) want the animals processed under the principles of "Halal." Other consumer groups wish to have a specific age (chevron or young goats). Two FSIS-inspected "*mobile slaughter units (MSU and TU)*" will be used to prepare CS-meat products for local market approaches. Widget Development & Trading Company, and its affiliate "Gotcha Goat, LLC", has been the only producer to put a United States Goat Meat Product in the marketplace and with a major retailer, the Kroger Company. Our plan of CS-products for market development is focused on the following goals:

1. Presentation
 - a. In our presentation we will use indicate the positive attributes of Climate Smart Use language on menus to and other marketing and advertising materials. In the menus that we are going to work to prepare, the Climate Smart attributes will be described in the listing of the food item, not as a special dish.
 - b. We will also list Climate Smart lamb & sheep raised animals when we prepare recipes. We have learned that most Americans are not familiar with all the ways that lamb, sheep and goat can be prepared. We will also provide recipes for Climate Smart Lamb, Sheep and Goat dishes that are cooked the American way in a recipe book that we will distribute. We will specify that the animals were grown in Climate Smart conditions.
 - c. We will use language on menus to recommend Climate Smart products.
2. Promotion
 - a. We will offer dinners, and free sampling and taste-testing events for Climate Smart Lamb, Sheep and Goat meat products to be tasted. This will provide individuals an opportunity to compare the differences between regular raised and Climate Smart meat to be compared
 - b. We will publicize the environmental benefits of Climate Smart meat products and dishes using marketing materials like posters, leaflets, and TV advertisements.
 - c. We will provide a financial incentive for diners to add Climate Smart products to their menus and to provide to their customers.
3. Peoples
 - a. We will provide chefs and food preparation staff with information about the health and environmental benefits of CS-meat products.
 - b. We will train chefs and food preparation staff in how to cook and prepare Climate Smart meat commodities.
 - c. Encourage front-of-house staff (e.g., waiters, hosts) to try Climate Smart -products dishes themselves.
 - d. Reward chefs and food preparation staff who create popular Climate Smart-product dishes.
 - e. Provide front-of-house staff with talking points to promote Climate Smart -products dishes to diners.
 - f. To encourage chefs as active change markers and promoters of low emission, nutritious, and affordable diets.

E. Agreement to participate in the Partnerships network

The project collaborators agree to contribute to the Partnerships Network and bring the efforts specific to working with underserved minority producers and landowners. We also seek to benefit from the experience and ideas of other teams in this network.

- iv. **A plan to develop and extend markets for climate-smart commodities generated as a result of project activities, including:**
 - A. Any partnerships designed to market resulting climate-smart commodities,

A1. Creating a mobile processing and marketing system to support the local, farm-direct meat production pipeline in a climate-conscious manner (MSU and TU).

1. *Exiting a mobile meat processing unit capable of cold storage, fabrication, processing, marketing, and cookery to deliver a farm-to-fork training experience for extension agents and front-line professionals.* Based on the successes and improvements of our current small-scale mobile demonstration system, we will develop a dynamic, compliant, and interactive meat processing trailer for science-based, farm-to-fork meat processing training and demonstrations.
2. *Develop and implement an efficient processing and marketing pipeline that utilizes a combination of venues, farmers' markets, local restaurants, craft butcher shops, and direct-to-consumer approaches to reduce transport and storage costs and increase the viability of locally produced meat enterprises.* With a demonstrable history of providing mobile programming to producers and our proven pedagogical "Meat Chemistry and Cuisine" program, we are well equipped to deliver this program in a manner that creates an impactful and enduring pipeline for participating producers, processors, and consumers.
3. *Empower and support a network of small farmers and cooperatives to maximize the Use and efficiency of mobile programming in the long term.* This unit will continue to serve as a valuable tool for the target audiences, including continued education of extension agents, students, and farmers beyond the funding period through the continued progressive and modular curricula. In addition, advanced workshops can be designed to build on the basic principles and address specialty topics as they become relevant to the industry.

B. A plan to track climate-smart (CS) commodities through the supply chains.

A summary of MMRV partners and a plan to track CS commodities market development strategies are presented in Table 7. We plan to follow CS commodities through TU, MSU, LU, AAMU, and PMHB CS value-added meats, Bob Bucholz Rancher, WDTC, heifer International, FSC/LAF, and surrounding local markets.

Table 7. Market Development

#	MMRV partners	2024	2025	2026	2027	Partnerships
1	PMHB ranch ¹					Building the value-added meat supply chains connecting under-served minority producers of low-CH ₄ sheep and goat meats to local customers.
	Sheep	100	100	100	100	
	Goats	100	100	100	100	
2	Bob Bucholz rancher ²					Building a value-added supply chains for CS-commodities to surrounding ethnic and local markets
	Sheep	600	600	600	600	
	Goats	600	600	600	600	
3	Underserved minority producers ³					Building a value-added commodities for local, low CH ₄ sheep and goat meats
	Sheep	480	480	480	480	
	Goats	480	480	480	480	
4	FSC/LAF	On-site demonstration for producers and stakeholders				* Training onsite demonstration and educating local producers on the economic benefits of low-CH ₄ sheep and goat meats. * Building value-added market development
5	WDTC	Training CS commodities and market development				

6	<i>Heifer International</i>	Education of producers, students, and stakeholders	
7	<i>Other markets</i>	Local surrounding ethnic food markets	Building the supply chains connecting to surrounding ethnic and local markets

PMHB = Phillips-McDonald Hickory Bend Family Farm; Widget Development & Trading Company (WDTC) = marketing consultant for CS commodities. The Federation of Southern Cooperatives/Land Assistance Fund (FSC/LAF)

¹ Two hundreds sheep and goats per year over the four years (total 800 sheep and goats) will be utilized for this project. Among 800 animals, 400 animals will be harvested using an FSIS-inspected "*mobile slaughter unit*" to enter the CS market development, 60 animals for CS research analysis, and 340 animals will be utilized for breeding purposes.

² Six hundred meat goats and sheep per year (total 2,400 animals) will be harvested using an FSIS-inspected "*mobile slaughter unit*" (Dr. Burnett, MSU and TU). Among the 2,400 animals, 2,300 animals will enter the supply chain and market development and 100 animals will be utilized for CS research purposes. Remaining animals (2,400) will be utilized for breeding purposes.

³ Total four-hundred-eighty sheep and four-hundred-eighty goats will be harvested per year over the three years using an FSIS-inspected "*mobile slaughter unit*". Among the 480 sheep and 480 goats, 40 sheep and 40 goats will be used for CS-carcass evaluation research (meat quality, meat color, fatty acids compositions etc.) and 440 sheep and 440 goats will be entered to development of CS commodities market.

C. Estimated economic benefits for participating producers, including market returns

First, underserved minority producers benefit from expanded markets for CS commodities which are produced using CS farming and forestry practices that reduce GHG emissions or sequester carbon. This effort works to create and expand markets, increase prices and provide incentives for CS commodities. Second, our current proposed project invests in trainings and technical assistance for underserved minority producers on CS-commodity production and practices. Third, this effort works to provide other on-farm benefits, from more productive land, long-term resiliency, and increased yields to lower fertilizer and other input costs. Finally, current proposed project is working to provide mitigation of GHG monitoring, measurement, reporting and verification systems. These are necessary to ensure CS-commodity markets deliver differentiated products that consumers trust.

D. Post-project potential:

- Resulting of CS practices, participating farmers, ranchers, and forest owners (young, old, large, small, and underserved) can participate to have meaningful involvement from small, medium, and underserved producers.
- The probability for the low-CH₄ sheep and goats market in the United States to continue to grow after the project period is high. During the MMRV Innovation phase, we will find a CH₄ measurement technology that is affordable and efficient for researchers and producers. During the pilot 2 phase, we will assess the effectiveness of the MMRV equipment and enable a diverse set of small and minority livestock producers to become the most significant producers of low-CH₄ sheep and goats. During the market development phase 3, we will develop supply chains with proven carbon reduction technology that generates low-CH₄ animal products.
- As small ruminant producers understand the benefits of creating new CS commodities, they will recognize the advantages of decarbonizing their meat supply chains. In addition, consumers will become aware that there is a better way to consume sustainable animal protein. As a result, more and more camp stakeholders will seek to participate in the market.

E. Climate boundary project site including Texas, Oklahoma, Mississippi, and Alabama States.

Climate-Smart Practices and Limitations

Climate-Smart practices under this grant shall be limited to the following practices:

NRCS Practice Code	Practice Name
340	Cover Crop
381	Silvopasture
528	Prescribed Grazing

All practices applied under this grant will follow NRCS practice standards unless noted below:

N/A

Overview of Reporting Requirements

Grant recipients are required to submit reports to document their performance under the *Partnerships for Climate-Smart Commodity* funding opportunity. These submissions will be required to use the Microsoft Excel workbook templates provided by USDA. The workbooks contain a series of worksheets that collect data in a standardized format to ensure data quality and allow for aggregation and summary of this information. The entire workbook must be submitted quarterly, with updates to all applicable worksheets. This guide is divided into three sections. The *Overview of Reporting Requirements* section summarizes the layout of the reporting workbook and presents the data elements included in each worksheet. It also describes additional documents that must be submitted to supplement the performance reports. The *Data Definitions* section provides descriptions and allowable response options for each data element. The guide also indicates whether each data element is required, applicable at times, or optional; as well as how frequently each data element must be updated. Finally, the *Appendices* contain practice and commodity lists that will be used for these reports. Reporting is necessary for USDA oversight of this effort. The data elements required for inclusion in the quarterly performance reports allow USDA to conduct selected audits to review whether producers are receiving federal funds from multiple sources for the same purpose; to determine whether GHG benefits from implementation of climate-smart agriculture and forestry (CSAF) practices are being estimated accurately; and for other purposes deemed appropriate by USDA.

The reporting worksheets collect information at four levels: project, partner, producer, and field.

Descriptions of each level:

Project level: Information about activities and impacts at a whole project/aggregate level (i.e., reflecting all activities under the grant agreement). Some project-level reporting is further subdivided by commodity type or a combination of commodity and CSAF practice(s) (commodity x practice).

Partner level: Information about activities related to a single organization (recipient, subrecipient, contractor, or other partner) within a project.

Producer level: Information about individual producers who have one or more farms enrolled in a project.

Field level: Information about individual fields enrolled in a project.

Certain data elements are required to be reported for each producer and field enrolled in a project. In order to minimize the burden associated with data collection and to enable USDA to match data to existing records, these producer- and field-specific records must use the producer's established FSA Farm, Tract and Field IDs, and report the State and County associated with the Farm ID. Associated data entered in conjunction with these data elements, such as Producer Name, must match the data contained in the customer's Business Partner record, and the Farm Operating Plan in Business File for that Farm ID. Disclosure of this information is protected under Section 1619 of the Food, Conservation, and Energy Act of 2008 (PL 110- 246), 7 U.S.C. 8791. Additionally, Departmental Regulation 4370-001 provides USDA's policies for collecting demographic data, including race, ethnicity and gender. Providing demographic information is voluntary and at the discretion of the customer. Demographic information is used by USDA for statistical purposes only and will not be used to determine an applicant's eligibility for programs or services for which they apply.

Note: For purposes of this guide, "farm" refers to the operation from which climate-smart commodities are produced and may represent farms, ranches, forests or other operations. Similarly, "field" refers to the individual land units at which climate-smart practices are being implemented to produce climate-smart commodities and may represent lots, farmsteads or other units, depending on the type of operation and commodity. The use of "Farm", "Tract" and "Field" align with the FSA definitions; for example, "A field is a part of a farm that is separated from the balance of the farm by a permanent boundary, such as; fences, permanent waterways, woodlands, croplines in cases where farming practices make it probable that this cropline is not subject to change, and other similar features."

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

The following tables list the data elements included in each reporting worksheet, along with a brief description of each item.

Project Summary

These data will be collected about each project. Cumulative results are reported each quarter. Report last quarter's entry if there has been no change in this quarter.

Table 1. Project Summary elements

Data element name	Description	Frequency
Commodity type	Type of commodity(ies) incentivized by the project	Quarterly
Commodity sales	Indicates sales of the commodity(ies) related to the project occurred this quarter	Quarterly
Farms enrolled	Indicates enrollment activities occurred this quarter	Quarterly
GHG calculation methods	Methods used to calculate greenhouse gas (GHG) benefits	Quarterly
GHG cumulative calculation	Method used to calculate cumulative GHG benefits	Quarterly
Cumulative GHG benefits	Whole project estimate of total GHG (CO ₂ e) emission reductions	Quarterly
Cumulative carbon stock	Whole project estimate of total carbon sequestration	Quarterly
Cumulative CO ₂ benefit	Whole project estimate of total CO ₂ emission reductions	Quarterly
Cumulative CH ₄ benefit	Whole project estimate of total CH ₄ emission reductions	Quarterly
Cumulative N ₂ O benefit	Whole project estimate of total N ₂ O emission reductions	Quarterly
Offsets produced	Amount of carbon offsets produced by project	Quarterly
Offsets sale	Name of marketplace where carbon offsets were sold	Quarterly
Offsets price	Price of carbon in offset sales	Quarterly
Insets produced	Amount of carbon insets produced by project	Quarterly
Cost of on-farm TA	Cost of on-farm technical assistance (TA) provided to producers	Quarterly
MMRV cost	Cost of measurement, monitoring, reporting, and verification (MMRV) activities	Quarterly
GHG monitoring method	Methods used by project to monitor GHG benefits (up to 5)	Quarterly
GHG reporting method	Methods used by project to report on GHG benefits (up to 5)	Quarterly
GHG verification method	Methods used to verify GHG benefits (up to 5)	Quarterly

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Partner Activities

These data will be collected at the project level. Each row in this worksheet will represent one organization involved in the project, including the recipient and all contributing partners. A partner is any organization that is receiving project funds or providing matching contributions (funds or in-kind contributions) to the project. While the recipient must complete one row for their own organization, not all data elements apply to the recipient. These exceptions are noted in the detailed descriptions of the specific elements in the *Data Definitions* section of this guide. Data are reported cumulatively each quarter. Report last quarter's entry if there has been no change in this quarter.

Table 2. Partner Activities elements

Data element name	Description	Frequency
Partner ID	Unique ID for each partner	One-time
Partner name	Name of partner organization	One-time
Partner type	Type of organization	One-time
Partner POC	Partner point of contact name	As applicable
Partner POC email	Partner point of contact email	As applicable
Partnership start date	Start of partnership on project	One-time
Partnership end date	End of partnership on project	As applicable
New partnership	Indicator for partner organizations that have no prior work with the recipient	As applicable
Partner total requested	Total amount requested to date by partner from recipient	Quarterly
Total match contribution	Total amount of match contribution by partner to date	Quarterly
Total match incentives	Total amount of match contribution by partner for incentives	Quarterly
Match type	Top 3 types of match contribution by partner, other than incentives	Quarterly
Match amount	Value of match contributions by type	Quarterly
Training provided	Top 3 types of training provided to the partner through project	Quarterly
Activity by partner	Top 3 types of activities provided by this partner to producers or other partners	Quarterly
Activity cost	Approximate cost per activity type provided by partner to producers or other partners	Quarterly
Products supplied	Names of products supplied to producers as part of project activities or incentives	Quarterly
Product source	Supplier or source of products supplied to producers as part of project activities or incentives	Quarterly

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Marketing Activities

These data will be collected at the project level. Each row in this worksheet will correspond to one commodity for which the project enrolls fields and one marketing channel used to sell that commodity by the project or producers enrolled in the project. Data are reported for the current quarter and are not cumulative. If no sales of the commodity were reported during a quarter, do not complete this worksheet for that quarter.

Table 3. Marketing Activities elements

Data element name	Description	Frequency
Commodity type	Type of commodity incentivized by the project	Quarterly
Marketing channel type	Type of marketing channels used	Quarterly
Number of buyers	Number of buyers per marketing channel	Quarterly
Names of buyers	Names of buyers in the marketing channel	Quarterly
Marketing channel geography	Geography of marketing channel	Quarterly
Value sold	Value of commodity sold by marketing channel	Quarterly
Volume sold	Volume of commodity sold by marketing channel	Quarterly
Price premium	Price premium of commodity by marketing channel	Quarterly
Price premium to producer	Percent of price premium that goes to the producer	Quarterly
Product differentiation method	Top 3 types of product differentiation methods used	Quarterly
Marketing method	Top 3 types of marketing methods used	Quarterly
Marketing channel identification method	Top 3 ways marketing channel was identified	Quarterly
Traceability method	Top 3 types of supply chain traceability methods used	Quarterly

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Producer Enrollment

These data will be collected at the producer level about each farm enrolled in the project. In this worksheet, each row will correspond to one farm that has at least one field enrolled in the project. Data are reported when a producer first enrolls one or more fields in the project. If a producer is enrolled in the project for multiple years, review the farm characteristics each time a new contract is signed and provide any necessary updates. The quarterly submission should contain information about each farm initially enrolled in the project during that quarter and for updates to farms that have re-enrolled during that quarter, as applicable. If no farms are enrolled during that quarter, do not complete this worksheet for that quarter.

Table 4. Producer Enrollment elements

Data element name	Description	Frequency
Farm ID	Unique Farm ID assigned by FSA	
State or territory	State name (must match FSA farm enrollment data)	
County of residence	County name (must match FSA farm enrollment data)	
Producer data change	Indicator that producer data was updated at re-enrollment	As applicable
Producer start date	Contract start date	Enrollment
Producer name	Name of primary operator	Enrollment
Underserved status	Indicator the primary operator is considered underserved and/or a small producer	Enrollment
Total area	Total area of enrolled operation	Annual
Total crop area	Total crop area in enrolled operation enrolled	Annual
Total livestock area	Total livestock confinement, pasture and rangeland in enrolled operation	Annual
Total forest area	Total forest area in enrolled operation	Annual
Livestock type	Top 3 types of livestock on enrolled operation	Annual
Livestock head	Total livestock currently managed (by type)	Annual
Organic farm	Indicator that part of the farm is certified or transitioning organic	Annual
Organic fields	Indicator that any of the enrolled fields are certified or transitioning organic	Annual
Producer motivation	Motivation for participation	Annual
Producer outreach	Top 3 types of outreach provided to producer	Annual
CSAF experience	Indicator of prior implementation of CSAF practices at this farm	Annual
CSAF federal funds	Indicator of prior receipt of federal funds for CSAF practices	Annual
CSAF state or local funds	Indicator of prior receipt of state funds for CSAF practices	Annual
CSAF nonprofit funds	Indicator of prior receipt of nonprofit funds for CSAF practices	Annual
CSAF market incentives	Indicator of prior receipt of market incentives for CSAF practices	Annual

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Field Enrollment

These data will be collected about each field enrolled in the project. In this worksheet, each row corresponds to one field x commodity combination enrolled in the project. Generally, data are reported once for each field, at its initial enrollment. The quarterly submission should contain information about each field initially enrolled in the project during that quarter. If no fields are enrolled during that quarter, do not complete this worksheet for that quarter. If a field is enrolled for multiple years, any relevant changes, such as a new ID number or changes to the commodity or practice combinations should be entered in this worksheet during the quarter it is re-enrolled, or as applicable.

Table 5. Field Enrollment elements

Data element name	Description
Farm ID	Unique Farm ID assigned by FSA
Tract ID	Unique Tract ID assigned by FSA
Field ID	Unique Field ID assigned by FSA
State or territory of field	State name
Physical County of field	Physical county name must match FSA farm records
Prior Field ID	Previous Field ID when reconstitution of farm results in new Field IDs
Field data change	Indicator that field data has changed from initial enrollment
Contract start date	Start date of contract
Total field area	Size of enrolled field
Commodity category	Category of commodity(ies) produced
Commodity type	Type of commodity(ies) produced
Baseline yield	Average yield of commodity in 3 years prior to enrollment
Baseline yield location	Location for which baseline yield is provided
Field land use	Most common land use in field in past 3 years
Field irrigated	Most common irrigation type in field in past 3 years
Field tillage	Most common tillage in field in past 3 years
Practice past extent - farm	Extent of operation that implemented this practice prior to project enrollment
Field any CSAF practice	Indicator for prior CSAF practices in this field in past 3 years
Practice past use - this field	Indicator of prior use of this practice in this field in the past 3 years
Practice type	CSAF practice(s) that will be implemented in enrolled field (up to 7)
Practice standard	Organization that developed CSAF practice standard implemented in field
Planned practice implementation year	Year that practice is planned to be implemented
Practice extent	Area or number of animals for which practice is implemented
Follow-on questions	Follow-on questions by practice type (see Table 11)

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Farm Summary

These data will be collected about each farm enrolled in the project. In this worksheet, each row will correspond to one farm that has at least one field enrolled in the project. The quarterly submission should contain updates to any data elements that have changed for each farm enrolled in the project during that quarter. If there are no changes from the previous quarter, do not complete this worksheet for that quarter. Data are not cumulative.

Table 6. Farm Summary elements

Data element name	Description	Frequency
Farm ID	Unique Farm ID assigned by FSA	
State or territory	State name	
County of residence	County name	
Producer TA received	Type of technical assistance provided to producer	Quarterly
Producer incentive amount	Total financial incentive provided to the producer	Quarterly
Incentive reason	Top 4 reason(s) for financial incentives provided to producer	Quarterly
Incentive structure	Top 4 units on which financial incentives are structured	Quarterly
Incentive type	Top 4 type(s) of financial incentives provided to producer	Quarterly
Payment on enrollment	Extent of payment provided to producer upon enrollment	Quarterly
Payment on implementation	Extent of payment provided to producer upon implementation of CSAF practices	Quarterly
Payment on harvest	Extent of payment provided to producer upon harvest or slaughter	Quarterly
Payment on MMRV	Extent of payment provided to producer upon reporting or verification	Quarterly
Payment on sale	Extent of payment provided to producer upon sale of commodity	Quarterly

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Field Summary

These data will be collected about each field enrolled in the project for a commodity x practice(s) combination. In this worksheet, each row will correspond to one field x commodity x practice(s) combination enrolled in the project. Data for each field will be reported quarterly and are not cumulative. Report data for any elements that have an update in that quarter. Greenhouse gas benefit estimates must be entered upon practice completion or annually, as appropriate. If there are no changes from the previous quarter, do not complete this worksheet for that quarter. This worksheet includes a section to report the “official” estimate of GHG benefits – amounts of greenhouse gas emissions reduced and carbon sequestered – for the field. These quantities refer to the estimates that are used to calculate the project’s aggregate impact (reported in Table 1). Tables 8 and 9 are used to report alternate estimates of the field-level GHG benefits when additional methods are used to model (Table 8) or measure (Table 9) these impacts. Any field that can use COMET-Planner must submit those results, either as the official or alternate model.

Table 7. Field Summary elements

Data element name	Description	Frequency
Farm ID	Unique Farm ID assigned by FSA	
Tract ID	Unique Tract ID assigned by FSA	
Field ID	Unique Field ID assigned by FSA	
State or territory of field	State name	
County of field	County name	
Commodity type	Type of commodity produced from field	Quarterly
Practice type	Type of practice(s) incentivized in field (up to seven)	Quarterly
Date practice complete	Date that practice implementation is certified complete	Quarterly
Contract end date	End date of contract	Quarterly
MMRV assistance provided	Indicator that MMRV assistance is provided to field	Quarterly
Marketing assistance provided	Indicator that marketing assistance provided for commodity from field	Quarterly
Incentive per acre or head	Indicator that a per acre/head incentives is provided for the CSAF practice(s) on this field	Quarterly
Field commodity value	Value of commodity produced from field	Quarterly
Field commodity volume	Volume of commodity produced from field	Quarterly
Cost of implementation	Total cost of practice implementation in field	Quarterly
Cost coverage	Percent of total cost of implementation of practice covered by project incentives	Quarterly
Field GHG monitoring	Methods used to monitor GHG benefits in field (up to 3)	Quarterly
Field GHG reporting	Methods used to report on GHG benefits for field (up to 3)	Quarterly
Field GHG verification	Methods used to verify GHG benefits for field (up to 3)	Quarterly
Field GHG calculations	Methods used to calculate GHG benefits for field	Quarterly
Field official GHG calculation	Method used to calculate official GHG benefits for field	Quarterly
Field official GHG ER	Official estimate of total GHG emission reductions for field	Quarterly
Field official carbon stock	Official estimate of total carbon sequestration for field	Quarterly
Field official CO ₂ ER	Official estimate of total CO ₂ emission reductions for field	Quarterly
Field official CH ₄ ER	Official estimate of total CH ₄ emission reductions for field	Quarterly
Field official N ₂ O ER	Official estimate of total N ₂ O emission reductions for field	Quarterly
Field offsets produced	Amount of carbon offsets produced in field	Quarterly
Field insets produced	Amount of carbon insets produced in field	Quarterly
Other field measurements	Indicator that field data was collected for reasons other than GHG benefit estimation	Quarterly

GHG Benefits - Alternate Modeled

If greenhouse gas benefits are modeled for the same field using multiple methods, the results for the alternate models are reported in this worksheet. The “alternate” models refer to those model results that were not used in the calculation of the project’s aggregate impact (as reported in Table 1). Any field that can use COMET-Planner must submit those results, either as the official or alternate model. These data will be collected about the modeled GHG benefits for each field x commodity x practice(s) combination. In this worksheet, each row will correspond to one field enrolled in the project. Data are not cumulative. Each quarterly submission should include information for all fields that have new modeled data. Greenhouse gas benefit estimates must be entered upon practice completion or annually, as appropriate.

Table 8. GHG Benefits – Alternate Modeled elements

Data element name	Description	Frequency
Farm ID	Unique Farm ID assigned by FSA	
Tract ID	Unique Tract ID assigned by FSA	
Field ID	Unique Field ID assigned by FSA	
State or territory of field	State name	
County of field	County name	
Commodity type	Type of commodity(ies) produced from the field (up to 6)	Annual
Practice type	Type of practice(s) incentivized in field (up to 7)	Annual
GHG model	Model used to calculate GHG benefits	Annual
Model start date	Start date of model run	Annual
Model end date	End date of model run	Annual
Total GHG benefits estimated	Estimate of total GHG benefits for field	Annual
Total carbon stock estimated	Estimate of total change in carbon stock for field	Annual
Total CO2 estimated	Estimate of total CO2 emission reductions for field	Annual
Total CH4 estimated	Estimate of total CH4 emission reductions for field	Annual
Total N2O estimated	Estimate of total N2O emission reductions for field	Annual

February 2023

GHG Benefits - Measured

Projects must report the results of any carbon stock or greenhouse gas emission measurements in this worksheet. These data will be collected at the field level. Each row will represent a separate measurement method used to calculate GHG benefits for a given field. Data are reported once per year of measurement and are not cumulative. Each quarterly submission should include information for any field for which there are new soil samples or new calculations of annual GHG benefits based on actual measurements.

Table 9. GHG Benefits - Measured data elements

Data element name	Description	Frequency
Farm ID	Unique Farm ID assigned by FSA	
Tract ID	Unique Tract ID assigned by FSA	
Field ID	Unique Field ID assigned by FSA	
State	State name	
County	County name	
GHG measurement method	Method of measurement	Annual
Lab name	Entity that conducted analysis	Annual
Measurement start date	Start date of measurements	Annual
Measurement end date	End date of measurements	Annual
Total CO ₂ reduction calculated	Calculation of total CO ₂ reduction	Annual
Total carbon stock change calculated	Calculation of change in carbon stock	Annual
Total CH ₄ reduction calculated	Calculation of total CH ₄ reduction	Annual
Total N ₂ O reduction calculated	Calculation of total N ₂ O reduction	Annual
Soil sample result	Numeric result from soil sample	Annual
Measurement type	Type of analysis conducted	Annual

Additional Environmental Benefits

Projects that track additional environmental benefits (e.g., water quality improvements) from enrolled fields report results in this worksheet. These data will be collected about each field. Each row in this worksheet will correspond to an enrolled field. Data are not cumulative. Estimates of environmental benefits must be entered upon practice completion or annually, as appropriate.

Table 10. Additional Environmental Benefits elements

Data element name	Description	Frequency
Farm ID	Unique Farm ID assigned by FSA	
Tract ID	Unique Tract ID assigned by FSA	
Field ID	Unique Field ID assigned by FSA	
State	State name	
County	County name	
Environmental benefits	Indicator that project tracks other environmental benefits	Annual
Reduction in nitrogen loss	Indicator that project tracks reductions in nitrogen loss	Annual
Amount	Amount	Annual
Purpose	Purpose of tracking those co-benefits	Annual
Reduction in phosphorus loss	Indicator that project tracks reductions in phosphorus loss	Annual
Amount	Amount	Annual
Purpose	Purpose of tracking those co-benefits	Annual
Other water quality	Indicator that project tracks other water quality improvements	Annual
Type	Type of water quality metric being tracked	Annual
Amount	Amount	Annual
Purpose	Purpose of tracking those co-benefits	Annual
Water quantity	Indicator that project tracks reduced water use	Annual
Amount	Amount	Annual
Purpose	Purpose of tracking those co-benefits	Annual
Reduced erosion	Indicator that project tracks reductions in soil erosion	Annual
Amount	Amount	Annual
Purpose	Purpose of tracking those co-benefits	Annual
Reduced energy use	Indicator that project tracks reductions in energy use	Annual
Amount	Amount	Annual
Purpose	Purpose of tracking those co-benefits	Annual
Avoided land conversion	Indicator that project tracks reductions in land conversion	Annual
Amount	Amount	Annual
Purpose	Purpose of tracking those co-benefits	Annual
Improved wildlife habitat	Indicator that project tracks improvements in wildlife habitat	Annual
Amount	Amount	Annual
Purpose	Purpose of tracking those co-benefits	Annual

Supplemental Data Submission

Project MMRV Plan

Definition of MMRV elements:

Measurement: Quantification of the greenhouse gas benefits (reduction or capture) using mathematical models and/or direct physical measurements in the field

Monitoring: Ongoing review and confirmation that the climate-smart practice has been implemented according to the agreed upon standard and documentation of any changes in the site, implementation, or GHG emissions impacts over time

Reporting: Documenting and sharing monitoring and measurement results with project partners, the recipient, and any third-party verification organization

Verification: Independent confirmation that measurement, monitoring and reporting information are complete, accurate and reliable.

Projects must submit an MMRV plan that includes details about how each of the following are addressed:

- Quantification approach, including:
 - GHG models used
 - GHG measurement plan (if applicable)
 - Approach to quantifying additional environmental benefits, if applicable (e.g., water quality, habitat)
- Verification approach:
 - Compliance criteria
 - Verification plan/methodology
- Approach to ensuring:
 - Additionality
 - Permanence
 - Leakage
 - Impacts of weather
- Plan for non-compliance

If the project is using a specific MMRV methodology or approach developed by the recipient, a project partner, or an outside organization, the project can submit documentation associated with the methodology as long as the documentation addresses each of the above categories.

If the project is tracking other environmental benefits (as reported in the *Additional Environmental Benefits* worksheet), include a description of the methodology and tools used to track and report on these benefits.

Field modeled GHG benefit reports

Results from any models besides COMET-Planner used to estimate GHG benefits must also be submitted as a separate report. This includes projects running COMET-Farm. The full results of any model can be submitted in the native/standard format generated by the modeling tool and must include the following Unique IDs in the report or in the file name: State, County, Farm ID, Tract ID, Field ID.

Field direct measurement results

For any direct physical measurements in the field, measurement results must be submitted as a separate report and must include the following Unique IDs in the report or in the file name: State, County, Farm ID, Tract ID, Field ID. Measurement results reports must include the name of the equipment used for sampling or data collection, the name of the lab that analyzed the data, and the analytical method used.

Sample report types include soil analysis reports, summarized results of portable emissions analyzers or flux towers, water quality analyses, and plant species counts. These could be collected for the purposes of determining GHG emission reductions or carbon sequestration amounts, for calibration of tools or models, for tracking other environmental benefits, or for other reasons.

Data Descriptions

This section provides descriptions and allowable response options for each data element. The guide also indicates whether each data element is required, applicable at times, or optional; as well as how frequently each data element must be updated.

Unique IDs

Project ID: Unique ID at the project level – “Award Identifying Number” shown on award documentation

Partner ID: Unique ID at the partner level – use EIN; if no EIN, a unique ID will be assigned for use in these reports

State or territory of operation: State or territory name

County of operation: Physical county name

Farm ID: Unique ID at the operation level assigned by Farm Service Agency (FSA)

Tract ID: Unique ID at the tract level assigned by FSA

Field ID: Unique ID at the field level assigned by FSA

February 2023

Cumulative N2O benefit**Data element name:** Cumulative N2O benefit**Reporting question:** What are the project's estimated total N2O emission reductions to date?

Description: Estimated total cumulative nitrous oxide reduction based on practice implementation. This is updated quarterly. If there are no updated numbers enter the same number as the previous quarter. Conversion rate is one ton of N₂O = 298 tons of CO₂eq.

Data type: Decimal**Select multiple values:** No**Measurement unit:** Metric tons N2O reduced in CO₂eq**Allowed values:** 0-10,000,000**Logic:** None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**Offsets produced****Data element name:** Offsets produced**Reporting question:** How many carbon offsets have been produced in the project?

Description: Total carbon offsets produced by enrolled project fields during the quarter. Offsets are defined as having been verified and certified using an accepted standard and sold into the carbon marketplace.

Data type: Decimal**Select multiple values:** No**Measurement unit:** Metric tons CO₂eq**Allowed values:** 0-10,000,000**Logic:** None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**Offsets sale****Data element name:** Offsets sale**Reporting question:** To what marketplace(s) were carbon offsets sold?

Description: Marketplaces to which carbon offsets produced by enrolled project fields were sold. Offsets are defined as having been verified and certified using an accepted standard and sold into the carbon marketplace. List each marketplace name. Separate names with commas.

Data type: Text**Select multiple values:** NA**Measurement unit:** Name**Allowed values:** Text**Logic:** Respond if >0 to 'Offsets produced'**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**Offsets price****Data element name:** Offsets price**Reporting question:** What was the average price of carbon received for offsets?

Description: Average price per metric ton paid for carbon offsets produced by enrolled project fields. Offsets are defined as having been verified and certified using an accepted standard and sold into the carbon marketplace.

Data type: Decimal**Select multiple values:** No**Measurement unit:** Dollars per metric ton**Allowed values:** 0-500**Logic:** Respond if >0 to 'Offsets produced'**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**Insets produced****Data element name:** Insets produced**Reporting question:** How many carbon insets have been produced in the project?

Description: Total carbon insets produced by enrolled fields during the quarter. Insets are defined as having been verified and certified using an accepted standard and accounted for within Scope 3 emissions for a firm.

Data type: Decimal**Select multiple values:** No**Measurement unit:** Metric tons CO₂eq**Allowed values:** 0-10,000,000**Logic:** None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly

February 2023

Cost of on-farm TA**Data element name:** Cost of on-farm TA**Reporting question:** What is the total amount that has been spent to provide on-farm TA?**Description:** Total cost of any field- or practice-specific technical assistance provided by the project (by recipient or partners) to any producers. This is updated quarterly. If there are no changes, enter the same number as the previous quarter.**Data type:** Decimal**Select multiple values:** No**Measurement unit:** Dollars**Allowed values:** \$0-\$50,000,000**Logic:** None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**MMRV cost****Data element name:** MMRV cost**Reporting question:** What is the total amount that has been spent on MMRV activities?**Description:** Total cost of all MMRV activities paid for by the project (recipient or partners). MMRV components are defined as measurement (calculations or estimations of GHG emissions), monitoring (ongoing review and confirmation that the climate-smart practices have been implemented according to the agreed upon standard and documentation of any changes in the site, implementation, or GHG emissions impacts over time), reporting (documenting and sharing monitoring and measurement results with project partners, the recipient, and any third-party verification organization), and verification (independent confirmation that measurement, monitoring and reporting information are complete, accurate and reliable). This is updated quarterly. If there are no changes, enter the same number as the previous quarter.**Data type:** Decimal**Select multiple values:** No**Measurement unit:** Dollars**Allowed values:** \$0-\$50,000,000**Logic:** None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**GHG monitoring method****Data element name:** GHG monitoring 1-5**Reporting question:** How did the project monitor GHG benefits?**Description:** Up to the five most common forms of monitoring GHG benefits used this quarter as part of MMRV requirements. Monitoring is defined as ongoing review and confirmation that the climate-smart practice has been implemented according to the agreed upon standard and documentation of any changes in the site, implementation, or GHG emissions impacts over time. Include up to 5 methods, based on which methods are most commonly used for this project. The worksheet provides five columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 5 GHG monitoring methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG monitoring methods as free text.**Data type:** List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Drones
- Ground-level photos and videos
- On-farm visit
- Plot-based sampling
- Producer records or attestation
- Satellite monitoring or remote sensing
- Soil metagenomics
- Soil sensors
- Water sensors
- Other (specify)

Marketing Activities**Commodity type**

Data element name: Commodity type	Reporting question: What type of commodity is produced by the farmers enrolled in this project?
Description: List a single commodity produced or marketed through incentives from this project. If multiple commodities are produced by the project, use additional rows of the worksheet to report each commodity. Use the FSA commodity list in Appendix B and choose the commodity from the list.	
Data type: List	Select multiple values: No
Measurement unit: Category	Allowed values: FSA commodity list
Logic: None – all respond	Required: Yes
Data collection level: Project	Data collection frequency: Quarterly

Marketing channel type

Data element name: Marketing channel type	Reporting question: What type of marketing channel is used to sell this commodity?
Description: List a single type of marketing channel used to sell the commodity produced by farmers enrolled in the project. If a single commodity is marketed through multiple channels, use additional rows of the worksheet to report each combination of commodity and marketing channel. If “other” is chosen, use the additional column to enter the other marketing channel type(s) as free text.	
Data type: List	Select multiple values: No
Measurement unit: Category	Allowed values: • Agricultural marketing board • Biorefinery • Commodity broker • Direct to consumer • Direct to institution • Direct to restaurant • Distributor (including grain elevators) • Food hub or cooperative • Food processor • Non-food byproducts processor • Retailer • USDA • Other (specify)
Logic: None – all respond	Required: Yes
Data collection level: Project	Data collection frequency: Quarterly

Number of buyers

Data element name: Number of buyers	Reporting question: How many buyers are there in this marketing channel?
Description: List the number of individual firms or buyers in this marketing channel.	
Data type: Integer	Select multiple values: No
Measurement unit: Count	Allowed values: 1-500
Logic: None – all respond	Required: Yes
Data collection level: Project	Data collection frequency: Quarterly

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Names of buyers

Data element name: Names of buyers	Reporting question: What are the names of all of the buyers in this marketing channel?
Description: Provide the names of all buyers in this marketing channel. Separate each name with a comma.	
Data type: Text	Select multiple values: NA
Measurement unit: Name	Allowed values: Text
Logic: None – all respond	Required: Yes
Data collection level: Project	Data collection frequency: Quarterly

Marketing channel geography

Data element name: Marketing channel geography	Reporting question: What is the primary geography of the marketing channel?
Description: The primary geography of the type of marketing channel. Primary geography means the scale at which most of the activity of buying and selling happens. Local means within a single state or directly neighboring states. Regional means within a five-to-ten state area. National means across the United States. International means specific locations outside of the United States. Global means across the world or not to a specific international location.	
Data type: List	Select multiple values: No
Measurement unit: Category	Allowed values: • Local • Regional • National • Global
Logic: None – all respond	Required: Yes
Data collection level: Project	Data collection frequency: Quarterly

Value sold

Data element name: Value sold	Reporting question: What is the value of the commodity sold in this marketing channel?
Description: The dollar value of the commodity sold in this marketing channel this quarter (non-cumulative).	
Data type: Decimal	Select multiple values: No
Measurement unit: Dollars	Allowed values: \$1-\$100,000,000
Logic: None – all respond	Required: Yes
Data collection level: Project	Data collection frequency: Quarterly

Volume sold

Data element name: Volume sold	Reporting question: What is the volume of the commodity sold in this marketing channel?
Description: The volume of the commodity sold in this marketing channel this quarter (non-cumulative).	
Data type: Decimal	Select multiple values: No
Measurement unit: Number	Allowed values: 1-100,000,000
Logic: None – all respond	Required: Yes
Data collection level: Project	Data collection frequency: Quarterly

Price premium to producer**Data element name:** Price premium to producer**Reporting question:** What percent of the price premium is provided to the producer for the commodity sold in this marketing channel?**Description:** The percent of the price premium provided to the producer for the commodity sold in this marketing channel this quarter. Price premium is the amount received above a 'business as usual' price.**Data type:** Decimal**Select multiple values:** No**Measurement unit:** Percent**Allowed values:** 0-100**Logic:** None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**Product differentiation method****Data element name:** Product differentiation method 1-3**Reporting question:** What methods are used to differentiate climate-smart commodities in this marketing channel?**Description:** Provide the methods used to differentiate the climate-smart commodity in this market channel. Product differentiation methods are ways to distinguish or differentiate the climate-smart commodity in the marketplace. Include up to 3 methods, based on which methods are most commonly used for this project. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 product differentiation methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other product differentiation methods as free text.**Data type:** List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Certification/verification for internal insetting
- Farm certification
- Label or badge used on packaging or marketing
- Third party certification/verification
- Trademark
- Other (specify)

Logic: None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**Marketing method****Data element name:** Marketing method 1-3**Reporting question:** What methods are used to market climate-smart commodities in this marketing channel?**Description:** Provide the method(s) used to market this commodity in this market channel. Marketing method is the way that potential buyers of the climate-smart commodity are engaged by the project partners as the sellers or facilitators of sale. Include up to 3 methods, based on which methods are most commonly used for this project. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 marketing methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other marketing methods as free text**Data type:** List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Label or badge used on packaging or marketing materials
- Marketing partnership (e.g., promotion by buyer)
- Print marketing campaign
- Social media and digital marketing campaign
- Verbal marketing campaign (e.g., radio, word of mouth)
- Other (specify)

Logic: None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly

Marketing channel identification method**Data element name:** Marketing channel identification method 1-3**Reporting question:** What methods are used to generate interest in climate-smart commodities in this marketing channel?

Description: Provide the marketing channel identification method(s) used for this commodity in this market channel. Market channel identification methods are the ways that producers and project partners generate interest in purchasing the climate-smart commodity. Include up to 3 methods, based on which methods are most commonly used for this project. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 marketing channel identification methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other marketing channel identification methods as free text

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Educational tours for buyers
- In-person lead generation
- Negotiated contracts with buyers
- Partnership network or project partner
- Other (specify)

Logic: None – all respond**Required:** Yes**Data collection level:** Project**Data collection frequency:** Quarterly**Traceability method****Data element name:** Traceability method 1-3**Reporting question:** What traceability methods are used for climate-smart commodities in this channel?

Description: Provide the traceability method(s) used for the climate-smart commodity in this market channel. Traceability methods are ways to trace the climate-smart commodity or the climate-smart claims through the supply chain. Include up to 3 methods, based on which methods are most commonly used for this project. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 traceability methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other traceability methods as free text.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Barcode or unique ID
- Blockchain
- Book and claim
- Chain of custody
- Mass balance
- Recordkeeping
- Registry with certification
- Segregation
- Supply shed
- Volume proxy
- Other (specify)

Producer Enrollment**Unique IDs**

Farm ID	Unique Farm ID assigned by FSA
State or territory	State name (must match FSA farm enrollment data)
County of residence	County name (must match FSA farm enrollment data)

Producer data change**Data element name:** Producer data change**Reporting question:** Is there new/updated information for a producer who is re-enrolling in the project?**Description:** Indicates that there is new or updated information for a producer who had previously enrolled in the project and is re-enrolling.**Data type:** List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Yes
- No

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Re-enrollment**Producer start date****Data element name:** Producer start date**Reporting question:** When did the producer enroll in the project?**Description:** Date that the producer enrolled in the project by signing their first contract.**Data type:** Date**Select multiple values:** NA**Measurement unit:** MM/DD/YYYY**Allowed values:** 01/01/2023 – 12/31/2030**Logic:** None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Initial enrollment**Producer name****Data element name:** Producer name**Reporting question:** What is the name of producer enrolled in the project?**Description:** Name of the producer enrolled in the project; the name must match the name contained in the customer's Business Partner record and the Farm Operating Plan in FSA Business File for that Farm ID.**Data type:** Text**Select multiple values:** NA**Measurement unit:** NA**Allowed values:** Text**Logic:** None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Initial enrollment

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Underserved status**Data element name:** Underserved status**Reporting question:** Is this producer considered an underserved and/or a small producer?

Description: Underserved status of the primary operator of the enrolled operation. Underserved producers generally include beginning farmers, socially disadvantaged farmers, veteran farmers, and limited resource farmers; women farmers and producers growing specialty crops are generally also included in these categories. Small farms are generally those with less than \$350,000 in annual gross cash farm income. Indicate whether this producer is considered underserved, a small producer, or both underserved and a small producer. Use "I don't know" if the producer declines to answer. Departmental Regulation 4370-001 provides USDA's policies for collecting demographic data, including race, ethnicity and gender. Providing demographic information is voluntary and at the discretion of the customer. Demographic information is used by USDA for statistical purposes only and will not be used to determine an applicant's eligibility for programs or services for which they apply.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Yes, underserved
- Yes, small producer
- Yes, underserved and small producer
- No
- I don't know

Logic: None – all respond**Required:** No**Data collection level:** Producer**Data collection frequency:** Initial enrollment**Total area****Data element name:** Total area**Reporting question:** What is the total area of the farm?

Description: Total area of the farm associated with the Farm ID. Report total area of the farm, even if only a portion of the farm is enrolled in the project. If a producer is enrolled in the project for multiple years, review the total area each time a new contract is signed and provide any necessary updates.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Less than 1 acre
- 1 to 9 acres
- 10 to 49 acres
- 50 to 69 acres
- 70 to 99 acres
- 100 to 139 acres
- 140 to 179 acres
- 180 to 219 acres
- 220 to 259 acres
- 260 to 499 acres
- 500 to 999 acres
- 1,000 to 1,999 acres
- 2,000 to 4,999 acres
- 5,000 or more acres

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Initial enrollment and subsequent enrollment(s), if applicable

February 2023

Total crop area

Data element name: Total crop area **Reporting question:** What percent of the current operation is cropland?

Description: Area of the total farm that is currently used as cropland. If a producer is enrolled in the project for multiple years, review the total crop area each time a new contract is signed and provide any necessary updates.

Data type: Integer

Select multiple values: No

Measurement unit: Acres

Allowed values: 0-100,000

Logic: None – all respond

Required: Yes

Data collection level: Producer

Data collection frequency: Initial enrollment and subsequent enrollment(s), if applicable

Total livestock area

Data element name: Total livestock area **Reporting question:** What amount of the current operation is used for livestock (by area)?

Description: Area of the total farm that is currently used for pasture, grazing, rangeland; or animal housing, feeding or milking. If a producer is enrolled in the project for multiple years, review the total livestock area each time a new contract is signed and provide any necessary updates.

Data type: Integer

Select multiple values: No

Measurement unit: Acres

Allowed values: 0-100,000

Logic: None – all respond

Required: Yes

Data collection level: Producer

Data collection frequency: Initial enrollment and subsequent enrollment(s), if applicable

Total forest area

Data element name: Total forest area **Reporting question:** What amount of the current operation is forested (by area)?

Description: Area of the total farm that is currently considered forest land use. Forest land use means that at least 10% of the land area is covered in trees that will be at least 13 feet tall when mature. If a producer is enrolled in the project for multiple years, review the total forest area each time a new contract is signed and provide any necessary updates.

Data type: Integer

Select multiple values: No

Measurement unit: Acres

Allowed values: 0-100,000

Logic: None – all respond

Required: Yes

Data collection level: Producer

Data collection frequency: Initial enrollment and subsequent enrollment(s), if applicable

February 2023

Livestock type**Data element name:** Livestock type 1-3**Reporting question:** What types of livestock are raised on the farm?

Description: Up to top three types of livestock (by head count) on the farm. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If there are fewer than 3 livestock types, leave unnecessary columns blank. If “other” is chosen, use the additional column to enter other livestock types as free text. If a producer is enrolled in the project for multiple years, review the livestock type each time a new contract is signed and provide any necessary updates.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Alpacas
- Beef cows
- Beefalo
- Buffalo or bison
- Chickens (broilers)
- Chickens (layers)
- Dairy cows
- Deer
- Ducks
- Elk
- Emus
- Equine
- Geese
- Goats
- Honeybees
- Llamas
- Reindeer
- Sheep
- Swine
- Turkeys
- Other (specify)

Logic: Respond if ‘Total livestock area’ >0**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Initial enrollment and subsequent enrollment(s), if applicable**Livestock head****Data element name:** Livestock head 1-3**Reporting question:** How many livestock (by type) are on this operation?

Description: Average annual head count for each type of livestock. Enter amounts for up to the top three livestock types by number. The worksheet provides three columns for this data element. Enter one value for each column. If there are fewer than 3 livestock types, leave unnecessary columns blank. If a producer is enrolled in the project for multiple years, review the average annual head count each time a new contract is signed and provide any necessary updates.

Data type: Integer**Select multiple values:** NA**Measurement unit:** Head count**Allowed values:** 1-10,000,000**Logic:** Respond if ‘Total livestock area’ >0**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Initial enrollment and subsequent enrollment(s), if applicable

Organic farm**Data element name:** Organic farm**Reporting question:** Is any part of the farm currently USDA-certified organic or transitioning to USDA-certified organic?

Description: USDA-certified organic means that the farm has been certified by an accredited organic certifying agent or is transitioning to USDA-certified organic by not using any of the prohibited substances. Yes means that some or all of the farm is certified organic or transitioning to certified organic. No means that no part of the farm is certified organic or transitioning to certified organic. If a producer is enrolled in the project for multiple years, review the organic certification status of the farm each time a new contract is signed and provide any necessary updates.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Yes
- No
- I don't know

Logic: None – all respond**Required:** No**Data collection level:** Producer**Data collection frequency:** Initial enrollment and subsequent enrollment(s), if applicable**Organic fields****Data element name:** Organic fields**Reporting question:** Are any of the fields enrolled in the project currently USDA-certified organic or transitioning to USDA-certified organic?

Description: USDA-certified organic means that the operation has been certified by an accredited organic certifying agent or is transitioning to USDA-certified organic by not using any of the prohibited substances. Yes means that some or all of the fields enrolled in the project are certified organic or transitioning to certified organic. No means that no part of the fields enrolled in the project are certified organic or transitioning to certified organic. If a producer is enrolled in the project for multiple years, review the organic certification status of the enrolled fields each time a new contract is signed and provide any necessary updates.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Yes
- No
- I don't know

Logic: Respond if yes to 'Organic operation'**Required:** No**Data collection level:** Producer**Data collection frequency:** Initial enrollment and subsequent enrollment(s), if applicable**Producer motivation****Data element name:** Producer motivation**Reporting question:** Which of the following was the primary reason the producer enrolled in this project?**Description:** Primary operator's motivation for enrolling in the project.**Data type:** List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Financial benefit
- Environmental benefit
- New market opportunity
- Partnerships or networks
- Other

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Initial enrollment

February 2023

Producer outreach**Data element name:** Producer outreach 1-3**Reporting question:** What types of outreach were provided to producers?

Description: Up to three most common types of outreach provided to producer prior to enrollment. Outreach activities are those focused on identifying and enrolling producers in the project. Outreach can come from the recipient or project partners. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If there are fewer than 3 outreach types, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other outreach types as free text.

Data type: List**Select multiple values:** Yes**Measurement unit:** Category**Allowed values:**

- Commodity organizations
- Conferences
- Cooperative extension
- Digital communications and resources
- Education workshops, field days, and town halls
- Existing partner networks
- Farm visits and one-on-one meetings
- General advertising
- Peer referrals and producer groups
- Phone calls
- Print communications and resources
- Retailers
- State agencies
- Targeted messaging using proprietary data
- Technical service providers
- Other (specify)

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Initial enrollment**CSAF experience****Data element name:** CSAF experience**Reporting question:** Has the primary operator implemented CSAF practices in the last ten years anywhere on the farm?

Description: Has this farm implemented climate-smart agriculture or forestry (CSAF) practices anywhere on the farm in the past 10 years or since the current primary operator took control (whichever time period is shorter)? CSAF practices are included in a list in Appendix A.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Yes
- No
- I don't know

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Initial enrollment

Practice past extent - farm**Data element name:** Practice past extent - farm**Description:** Prior to enrollment, on what portion of the whole farm had this (these) CSAF practice(s) ever been used by the primary operator? If multiple practices are planned to be implemented in this field, enter the value that best corresponds to the farm's prior experience with the planned set of practices.**Data type:** List**Measurement unit:** Category**Reporting question:** What percent of the farm has implemented this CSAF practice (combination) previously?**Select multiple values:** No**Allowed values:**

- Never used
- Used on less than 25% of operation
- Used on 25-50% of operation
- Used on 51-75% of operation
- Used on more than 75% of operation

Required: Yes**Logic:** None – all respond**Data collection level:** Field**Data collection frequency:** Initial enrollment**Field any CSAF practice****Data element name:** Field any CSAF practice**Description:** Prior to enrollment, have any CSAF practice or practices been used in this field in the past 3 years? CSAF practices are included in a list in Appendix A.**Data type:** List**Measurement unit:** Category**Reporting question:** What is this field's prior experience with CSAF practices?**Select multiple values:** No**Allowed values:**

- Yes
- No
- I don't know

Required: Yes**Logic:** None – all respond**Data collection level:** Field**Data collection frequency:** Initial enrollment**Practice past use - this field****Data element name:** Practice past use - this field**Description:** Prior to enrollment, had this (these) CSAF practice(s) been used in this field in the in the past 3 years? Enter yes if all of the practices had been used previously in this field; enter some if multiple practices are being implemented and one or more, but not all of the practices had been used previously in this field; and enter no if none of the practices had been used previously in this field.**Data type:** List**Measurement unit:** Category**Reporting question:** Have this CSAF practice (combination) been implemented previously in this field?**Select multiple values:** No**Allowed values:**

- Yes
- Some
- No
- I don't know

Required: Yes**Logic:** None – all respond**Data collection level:** Field**Data collection frequency:** Initial enrollment

February 2023

Practice type**Data element name:** Practice type 1-7**Reporting question:** What CSAF practice is being implemented in this field through the project?

Description: Which CSAF practice or practices will be implemented on this field as part of enrollment in the project? CSAF practices are included in a list in Appendix A. The worksheet provides seven columns for this data element. Enter one value for each column. If there are fewer than 7 practices being implemented on this field through enrollment in the project, leave unnecessary columns blank.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:** See list in Appendix A**Logic:** None – all respond**Required:** Yes**Data collection level:** Field**Data collection frequency:** Initial enrollment**Practice standard****Data element name:** Practice standard 1-7**Reporting question:** What standard does the CSAF practice follow?

Description: Is the CSAF practice being implemented on the field as part of enrollment in the project following a defined practice standard? The worksheet provides seven columns for this data element. Enter one value for each column, corresponding to the practice types entered in the previous columns. If there are fewer than 7 practices being implemented on this field through enrollment in the project, leave unnecessary columns blank.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- NRCS
- Other (specify)

Logic: None – all respond**Required:** Yes**Data collection level:** Field**Data collection frequency:** Initial enrollment**Planned practice implementation year****Data element name:** Practice 1-7 implementation year**Reporting question:** What year is the CSAF practice planned to be implemented?

Description: Year that the CSAF practice is planned to be implemented on the field. Use 2022 for early adopters, defined as fields that have the practice actively implemented in 2022 (prior to contract being signed for this project). The worksheet provides seven columns for this data element. Enter one value for each column, corresponding to the practice types entered in the previous columns. If there are fewer than 7 practices being implemented on this field through enrollment in the project, leave unnecessary columns blank.

Data type: Integer**Select multiple values:** No**Measurement unit:** Year**Allowed values:** 2022-2030**Logic:** None – all respond**Required:** Yes**Data collection level:** Field**Data collection frequency:** Initial enrollment**Practice extent****Data element name:** Practice 1-7 extent**Reporting question:** To what extent is the practice implemented?

Description: Total area, length, or head where the practice is being implemented in the field specified by the contract.

Data type: Decimal**Select multiple values:** No**Measurement unit:** Extent**Allowed values:** .01-100,000**Logic:** None – all respond**Required:** Yes**Data collection level:** Field**Data collection frequency:** Initial enrollment

February 2023

Practice extent unit**Data element name:** Practice 1-7
extent unit**Reporting question:** Unit for extent of practice implementation**Description:** Unit for extent of practice implementation on the field specified by the contract. If "other" is chosen, use the additional column to enter the appropriate unit.**Data type:** List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Acres
- Head of livestock
- Linear feet
- Square feet
- Other (specify)

Logic: None – all respond**Required:** Yes**Data collection level:** Field**Data collection frequency:** Initial enrollmentCSAF Practice Sub-questions

For certain practices, additional questions are asked that provide information necessary to estimate greenhouse gas benefits from implementation of the practice. See Table 11 in the *CSAF Practice Sub-questions* section for descriptions of individual questions to be answered depending on the CSAF practices selected.

February 2023

Farm Summary**Unique IDs**

Farm ID	Unique Farm ID assigned by FSA
State or territory	State name (must match FSA farm enrollment data)
County of residence	County name (must match FSA farm enrollment data)

Producer TA received

Data element name: Producer TA received
1-3

Reporting question: What types of technical assistance were provided to this producer?

Description: Did the recipient or any partner provide technical assistance (TA) to the producer this year? Technical assistance is any training, education, capacity building or other support provided by any project partner(s) directly to producers enrolled in the project. List up to the top three most common types of TA provided to this producer. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If there are fewer than 3 TA types, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other TA types as free text.

Data type: List

Select multiple values: No

Measurement unit: Category

Allowed values:

- Demonstration plots
- Equipment demonstrations
- Group field days or in-person field workshops
- Hotline
- One-on-one enrollment assistance
- One-on-one field visits
- One-on-one producer mentorship
- Producer networks and peer-to-peer groups
- Retailer consultation
- Social media/digital tools
- Train-the-trainer opportunities
- Virtual meetings or field days
- Webinars and videos
- Written materials
- None
- Other (specify)

Logic: None – all respond

Required: Yes

Data collection level: Producer

Data collection frequency: Quarterly

Producer incentive amount

Data element name: Producer incentive amount

Reporting question: What is the total value of financial incentives provided to this producer?

Description: Total incentive payment received by the producer from USDA project funds for the year (non-cumulative). Do not include incentive payments made with partner match funds.

Data type: Decimal

Select multiple values: NA

Measurement unit: Dollars

Allowed values: \$0-\$5,000,000

Logic: None – all respond

Required: Yes

Data collection level: Producer

Data collection frequency: Quarterly

February 2023

Incentive reason

Data element name: Incentive reason 1-4 **Reporting question:** Why were incentives provided to this producer?

Description: List up to four reasons for producer incentive payments. List the top 4 based on total value of the incentive for each reason. The worksheet provides four columns with a drop-down list of the allowed values. Choose one value for each column. If there are fewer than 4 reasons, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other reasons as free text.

Data type: List

Select multiple values: No

Measurement unit: Category

Allowed values:

- Avoided conversion
- Conference or training attendance
- Demographics/equity payment
- Enrollment
- Foregone revenue
- Historic data collection
- Identity preservation (supply chain tracing)
- Implementation of practices
- MMRV (e.g., data collection, reporting)
- Passing audit
- Price premium on output
- Yield change
- Other (specify)

Logic: None – all respond

Required: Yes

Data collection level: Producer

Data collection frequency: Quarterly

Incentive structure

Data element name: Incentive structure 1-4 **Reporting question:** What are the units for the financial incentives provided to this producer?

Description: List the structures (units) corresponding to the top 4 (by dollar value) incentive payments to producers. Production unit is weight or volume (bushel, kilogram, ton). The worksheet provides four columns with a drop-down list of the allowed values. Choose one value for each column. If there are fewer than 4 structure types, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other structure types as free text.

Data type: List

Select multiple values: No

Measurement unit: Category

Allowed values:

- Flat rate
- Per animal head
- Per area
- Per length
- Per production unit
- Per ton GHG
- Per tree
- Other (specify)

Logic: None – all respond

Required: Yes

Data collection level: Producer

Data collection frequency: Quarterly

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Incentive type**Data element name:** Incentive type 1-4**Reporting question:** What type of incentives were provided to each producer?

Description: List the top 4 types of incentive payments to producers (based on dollar value). The worksheet provides four columns with a drop-down list of the allowed values. Choose one value for each column. If there are fewer than 4 incentive types, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other incentive types as free text.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Cash payment
- Equipment loan
- Guaranteed commodity premium payment
- Inputs and supplies
- Land rental
- Loan
- Paid labor
- Post-harvest transportation
- Tuition or fees for training
- Other (specify)

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Quarterly**Payment on enrollment****Data element name:** Payment on enrollment**Reporting question:** What portion of the financial incentive is provided to the producer upon enrollment in the project?

Description: Any incentive payment provided to the producer upon enrollment/signing a contract, and not related to any implementation, MMRV or sales activities. Full payment means the full incentive amount for any contract held by the producer is paid upon enrollment. Partial payment means that only part of the full incentive amount for any contract held by the producer is paid upon enrollment. No payment means that none of the full incentive amount for any contract held by the producer is paid upon enrollment.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Full payment
- Partial payment
- No payment

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Quarterly**Payment on implementation****Data element name:** Payment on implementation**Reporting question:** What portion of the financial incentive is provided to the producer upon implementation of the practices?

Description: Any incentive payment provided to the producer upon implementing the practices included in the contract. Full payment means the full incentive amount for any contract held by the producer is paid upon implementation. Partial payment means that only part of the full incentive amount for any contract held by the producer is paid upon implementation. No payment means that none of the full incentive amount for any contract held by the producer is paid upon implementation.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Full payment
- Partial payment
- No payment

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Quarterly

February 2023

Payment on harvest**Data element name:** Payment on harvest**Reporting question:** What portion of the financial incentive is provided to the producer upon harvest of the commodity?

Description: Any incentive payment provided to the producer upon harvesting or slaughtering the commodity included in the contract. Full payment means the full incentive amount for any contract held by the producer is paid upon harvest. Partial payment means that only part of the full incentive amount for any contract held by the producer is paid upon harvest. No payment means that none of the full incentive amount for any contract held by the producer is paid upon harvest.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Full payment
- Partial payment
- No payment

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Quarterly**Payment on MMRV****Data element name:** Payment on MMRV**Reporting question:** What portion of the financial incentive is provided to the producer upon completing MMRV requirements?

Description: Any incentive payment provided to the producer upon completing the annual MMRV requirements included in the contract. Full payment means the full incentive amount for any contract held by the producer is paid upon MMRV being complete. Partial payment means that only part of the full incentive amount for any contract held by the producer is paid upon MMRV being complete. No payment means that none of the full incentive amount for any contract held by the producer is paid upon MMRV being complete.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Full payment
- Partial payment
- No payment

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Quarterly**Payment on sale****Data element name:** Payment on sale**Reporting question:** What portion of the financial incentive is provided to producer upon sale of the commodity?

Description: Any incentive payment provided to the producer upon sale of the commodity included in the contract. Full payment means the full incentive amount for any contract held by the producer is paid upon sale. Partial payment means that only part of the full incentive amount for any contract held by the producer is paid upon sale. No payment means that none of the full incentive amount for any contract held by the producer is paid upon sale.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Full payment
- Partial payment
- No payment

Logic: None – all respond**Required:** Yes**Data collection level:** Producer**Data collection frequency:** Quarterly

Field Summary**Unique IDs**

Farm ID	Unique Farm ID assigned by FSA
Tract ID	Unique Tract ID assigned by FSA
Field ID	Unique Field ID assigned by FSA
State or territory of field	State name (must match FSA farm enrollment data)
County of field	County name (must match FSA farm enrollment data)

Commodity type

Data element name: Commodity type **Reporting question:** What type of commodity is produced from this field?

Description: Type of commodity produced in field enrolled in the project. See full list in Appendix B. The worksheet provides multiple columns with a drop-down list of the allowed values. Choose one value for each column. Leave unnecessary columns blank.

Data type: List

Select multiple values: No

Measurement unit: Category

Allowed values: FSA commodity list

Logic: None – all respond

Required: Yes

Data collection level: Field

Data collection frequency: Quarterly

Practice type

Data element name: Field practice type 1-7 **Reporting question:** What CSAF practice is being implemented in this field through the project?

Description: Which climate-smart agriculture or forestry (CSAF) practice or practices are being implemented in this project? CSAF practices are included in a list in Appendix A. The worksheet provides seven columns for this data element. Enter one value for each column. If there are fewer than 7 practices being implemented on this field through enrollment in the project, leave unnecessary columns blank.

Data type: List

Select multiple values: No

Measurement unit: Category

Allowed values: See list in Appendix A

Logic: None – all respond

Required: Yes

Data collection level: Field

Data collection frequency: Quarterly

Date practice complete

Data element name: Date practice complete **Reporting question:** When did the project certify CSAF practice implementation as complete?

Description: Date that the project certifies that implementation of the CSAF practice is complete on the field. Use January of the year prior to contract year for early adopters, defined as fields that have the practice actively implemented in the year prior to a contract associated with this project is signed). The worksheet provides seven columns for this data element. Enter one value for each column, corresponding to the practice types entered in the previous columns. If there are fewer than 7 practices being implemented on this field through enrollment in the project, leave unnecessary columns blank.

Data type: Date

Select multiple values: No

Measurement unit: MM/DD/YYYY

Allowed values: 01/01/2023 – 12/31/2030

Logic: None – all respond

Required: Yes

Data collection level: Field

Field commodity value

Data element name: Field commodity value	Reporting question: What is the value of the commodity produced on the enrolled field?
Description: The dollar value of the commodity produced on the enrolled field.	
Data type: Decimal	Select multiple values: No
Measurement unit: Dollars	Allowed values: \$1-\$10,000,000
Logic: None – all respond	Required: Yes
Data collection level: Field	Data collection frequency: Quarterly

Field commodity volume

Data element name: Field commodity volume	Reporting question: What is the volume of commodity produced on the enrolled field?
Description: The volume of the commodity produced on the enrolled field	
Data type: Decimal	Select multiple values: No
Measurement unit: Number	Allowed values: 1-10,000,000
Logic: None – all respond	Required: Yes
Data collection level: Field	Data collection frequency: Quarterly

Field commodity volume unit

Data element name: Field commodity volume unit	Reporting question: What is the unit of volume?
Description: The unit associated with the volume of the commodity produced on the enrolled field. If “other” is chosen, enter the appropriate value in the additional column.	
Data type: List	Select multiple values: No
Measurement unit: Category	Allowed values: • Bushels • Carcass weight pounds • Gallons • Head • Linear feet • Liveweight pounds • Pounds • Tons • Other (specify)
Logic: None – all respond	Required: Yes
Data collection level: Field	Data collection frequency: Quarterly

Cost of implementation

Data element name: Cost of implementation	Reporting question: What is the cost of practice implementation in the field?
Description: Total annual estimated cost per unit of implementing the practice(s) in the enrolled field.	
Data type: Decimal	Select multiple values: No
Measurement unit: Dollars	Allowed values: \$1-\$10,000,000
Logic: None – all respond	Required: Yes
Data collection level: Field	Data collection frequency: Quarterly

February 2023

Field GHG reporting**Data element name:** Field GHG reporting 1-3**Reporting question:** How were GHG benefits reported for this field?

Description: Up to the top three forms of reporting on GHG benefits as part of MMRV requirements. Reporting is defined as documenting and sharing monitoring and measurement results with project partners, the recipient, and any third-party verification organization. Include up to 3 methods, based on which methods are most commonly used for this field. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 GHG reporting methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG reporting methods as free text.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Automated devices
- Email
- Mobile app
- Paper
- Third-party actors
- Website
- Other (specify)

Logic: None – all respond**Required:** Yes**Data collection level:** Field**Data collection frequency:** Quarterly**Field GHG verification****Data element name:** Field GHG verification 1-3**Reporting question:** How was implementation of practices to reduce GHG emissions verified for this field?

Description: Up to the top three of verification of GHG benefits as part of MMRV requirements. Verification is defined as independent confirmation that measurement, monitoring and reporting information are complete, accurate and reliable. Include up to 3 methods, based on which methods are most commonly used for this field. The worksheet provides three columns with a drop-down list of the allowed values. Choose one value for each column. If fewer than 3 GHG verification methods are used, leave unnecessary columns blank. If "other" is chosen, use the additional column to enter other GHG verification methods as free text.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:**

- Artificial intelligence
- Computer modeling
- Recipient audit
- Photos
- Record audit
- Satellite imagery
- Site or field visit
- Third-party audit
- Other (specify)

County of field	County name (must match FSA farm enrollment data)

Commodity type**Data element name:** Commodity type 1-6**Reporting question:** What type of commodity(ies) is produced from this field?

Description: Type of commodity(ies) produced in field enrolled in the project. See full list of commodity options in Appendix B. The worksheet provides multiple columns with drop-down lists of the allowed values. Choose one value for each column. Leave unnecessary columns blank

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:** FSA commodity list**Logic:** None – all respond**Required:** If project calculates GHG benefits using multiple methods**Data collection level:** Field**Data collection frequency:** Annual**Practice type****Data element name:** Practice type 1-7**Reporting question:** What CSAF practice is being implemented by this project?

Description: Which CSAF practice or practices are being implemented in this project? CSAF practices are included in a list in Appendix A. The worksheet provides seven columns for this data element. Enter one value for each column. If there are fewer than 7 practices being implemented by the project, leave unnecessary columns blank.

Data type: List**Select multiple values:** No**Measurement unit:** Category**Allowed values:** See list in Appendix A**Logic:** None – all respond**Required:** If project calculates GHG benefits using multiple methods**Data collection level:** Field**Data collection frequency:** Annual

GHG Benefits - Measured**Unique IDs**

Farm ID	Unique Farm ID assigned by FSA
Tract ID	Unique Tract ID assigned by FSA
Field ID	Unique Field ID assigned by FSA
State or territory of field	State name (must match FSA farm enrollment data)
County of field	County name (must match FSA farm enrollment data)

GHG measurement method**Data element name:** GHG measurement method**Reporting question:** What measurement method is used to calculate GHG benefits?**Description:** Field-based measurement method used to calculate GHG benefits. If “other” is chosen, enter the appropriate value as free text in the additional column.**Data type:** List**Measurement unit:** Category**Select multiple values:** No**Allowed values:**

- Emissions measurement unit
- Flux towers
- Litterbags
- Plant measurements
- Portable emissions analyzers
- Soil flux chambers
- Soil samples
- Soil sensors
- Vehicle-mounted sensors
- Other (specify)

Required: If a project conducts soil samples or takes carbon stock or greenhouse gas emission measurements in this field**Logic:** None – all respond**Data collection level:** Field**Data collection frequency:** Annual**Lab name****Data element name:** Lab name**Reporting question:** What is the name of the lab that processed the measurement samples?**Description:** Name of entity that received data and conducted analysis of samples.**Data type:** Text**Select multiple values:** No**Measurement unit:** NA**Allowed values:** Free text**Logic:** None – all respond**Required:** If applicable**Data collection level:** Field**Data collection frequency:** Annual

Additional Environmental Benefits**Unique IDs**

Farm ID	Unique Farm ID assigned by FSA
Tract ID	Unique Tract ID assigned by FSA
Field ID	Unique Field ID assigned by FSA
State or territory of field	State name (must match FSA farm enrollment data)
County of field	County name (must match FSA farm enrollment data)

Environmental benefits

Data element name: Environmental benefits

Reporting question: Are environmental benefits other than GHGs being tracked in the field?

Description: Tracking of environmental benefits other than greenhouse gas emission reductions and carbon sequestration in the enrolled field. Tracking means at a minimum using some form of monitoring and reporting that can quantify benefits.

Data type: List

Select multiple values: No

Measurement unit: Category

Allowed values:

- Yes
- No
- I don't know

Logic: None – all respond

Required: Yes

Data collection level: Field

Data collection frequency: Annual

Reduction in nitrogen loss

Data element name: Reduction in nitrogen loss

Reporting question: Are reductions in nitrogen losses being tracked in the field?

Description: Tracking reductions in nitrogen losses in the enrolled field. Tracking means at a minimum using some form of monitoring and reporting that can quantify benefits.

Data type: List

Select multiple values: No

Measurement unit: Category

Allowed values:

- Yes
- No
- I don't know

Logic: Respond if yes to 'Environmental benefits'

Required: Yes

Data collection level: Field

Data collection frequency: Annual

Reduction in nitrogen loss amount

Data element

name: Reduction in nitrogen loss amount

Reporting question: How much reduction in nitrogen losses have been measured in the field?

Description: Total amount of reduction in nitrogen losses that is measured and reported in the enrolled field.

Data type: Decimal

Select multiple values: No

Measurement unit: Amount

Allowed values: 0-1,000,000

Logic: Respond if yes to 'Reduction in nitrogen loss'

Required: Yes

Data collection level: Field

Data collection frequency: Annual

CSAF Practice Sub-questions

For some CSAF practices, there is an additional set of questions that are unique to each practice. Responses to these questions are needed to verify estimated GHG benefits of these practices. If a field is implementing a CSAF practice with an NRCS CPS code in Table 11, answer the follow-up questions listed next to the relevant practice name in the table. Use the *Supplemental Reporting Workbook – CSAF Practice Sub-questions* to report the required information.

Table 11. Follow-on questions for select CSAF practices

Practice name and code	Follow-up question	Options (select one)
Alley Cropping (CPS 311)	Species category (select most common/extensive type if using more than one)	Coniferous trees Deciduous trees Shrubs
	Species density (number of trees planted per acre)	1-10,000
Anaerobic Digester (CPS 366)	Waste storage system prior to installing anaerobic digester	Aerobic lagoon Anaerobic digester (complex mix) with energy generation Anaerobic digester (plug flow) with energy generation Anaerobic lagoon Composting Covered lagoon (no energy generation or flaring) Covered lagoon with energy generation Covered lagoon with flaring Daily spread Deep bedding pack Deep pit Dry lot Dry stacking/solid storage Pasture/range/paddock Poultry with bedding Poultry without bedding (e.g., high rise) Slurry tank/basin
		Covered lagoon with energy generation Covered lagoon with flaring Covered lagoon (no energy generation or flaring) Complex mix with energy generation Plug flow with energy generation Other (specify)
		Food waste Straw or bedding Wastewater Other (specify)

February 2023

Conservation Crop Rotation (CPS 328)	Conservation crop type	Brassica Broadleaf Cool season Grass Legume Warm season
	Change implemented	Added perennial crop Reduced fallow period Both
	Conservation crop rotation tillage type	Conventional (plow, chisel, disk) No-till, direct seed Reduced till Strip till None Other (specify)
	Total conservation crop rotation length in days	1-120
Contour Buffer Strips (CPS 332)	Strip width (feet)	1-100
	Species category	Grasses Forbs Mix
Cover Crop (CPS 340)	Species category (select most common/extensive type if using more than one)	Brassicas Forbs Grasses Legume Non-legume broadleaves
	Cover crop planned management	Grazing Haying Termination
	Cover crop termination method	Burning Herbicide application Incorporation Mowing Rolling/crimping Winter kill/frost
Critical Area Planting (CPS 342)	Species category (select most common/extensive type if using more than one)	Grass Grass legume/forb mix Herbaceous woody mix Perennial or reseeding Shrubs Trees
Feed Management (CPS 592)	Crude protein (percent)	0-100
	Fat (percent)	0-100
	Feed additives/supplements	Chemical Edible oils/fats Seaweed/kelp Other (specify)
Field Border (CPS 386)	Species category (select most common/extensive type if using more than one)	Forbs Grasses Mix Shrubs

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

	Strip width (feet)	20-1,000
Filter Strip (CPS 393)	Species category (select most common/extensive type if using more than one)	Forbs Grasses Mix Shrubs
Forest Farming (CPS 379)	Land use in previous year	Forest Multi-story cropping Pasture/grazing land Row crops Other agroforestry
Forest Stand Improvement (CPS 666)	Purpose for implementation	Maintain or improve forest carbon stocks Maintain or improve forest health and productivity Maintain or improve forest structure and composition Maintain or improve wildlife, fish, and pollinator habitat Manage natural precipitation more efficiently Reduce forest pest pressure Reduce forest wildfire hazard
Grassed Waterway (CPS 412)	Species category (select most common/extensive type if using more than one)	Flowering Plants Forbs Grasses
Hedgerow Planting (CPS 422)	Species category (select most common/extensive type if using more than one)	Grasses Shrubs Trees
	Species density (number of trees planted per acre)	1-10,000
Herbaceous Wind Barriers (CPS 603)	Species category (select most common/extensive type if using more than one)	Forbs Grasses Mix Shrubs
	Barrier width (feet)	1-1,000
	Number of rows	1-100
Mulching (CPS 484)	Mulch type	Gravel Natural Synthetic Wood
	Mulch cover (percent of field)	0-100

Partnerships for Climate-Smart Commodities Data Dictionary for Recipients

February 2023

Nutrient management (CPS 590)	Nutrient type with CPS 590	Biosolids Commercial fertilizers Compost EEf (nitrification inhibitor) EEf (slow or controlled release) EEf (urease inhibitor) Green manure Liquid animal manure Organic by-products Organic residues or materials Solid/semi-solid animal manure Wastewater
	Nutrient application method with CPS 590	Banded Broadcast Injection Irrigation Surface application Surface application with tillage Variable rate
	Nutrient application method in the previous year	Banded Broadcast Injection Irrigation Surface application Surface application with tillage Variable rate
	Nutrient application timing with CPS 590	Single pre-planting Single post-planting Split pre- and post-planting Split post-planting
	Nutrient application timing in the previous year	Single pre-planting Single post-planting Split pre- and post-planting Split post-planting
	Nutrient application rate with CPS 590	0-20,000
	Nutrient application rate unit with CPS 590	Gallons per acre Pounds per acre
	Nutrient application rate change	Decrease compared to previous year Increase compared to previous year No change
	Species category (select most common/extensive type if using more than one)	Cool-season broadleaf Cool-season grass Warm-season broadleaf Warm-season grass
	Termination process	Grazing Haying (i.e., cutting and baling) Other (specify)
Prescribed Grazing (CPS 528)	Grazing type	Cell grazing Deferred rotational Management intensive Rest-rotation

Partnerships for Climate-Smart Commodities

Additional Specific Terms and Conditions

February 2023

I. Overarching Statement

The following award terms and conditions are applicable to Partnerships for Climate-Smart Commodities agreements and are in addition to the USDA FPAC General Terms and Conditions. The award recipient must abide by all terms of this grant including, but not limited to, the General Terms and Conditions, the terms in the Funding Opportunity and associated Frequently Asked Questions, and this addendum. The recipient must also deliver on the planned objectives in the project narrative and budget narrative associated with this grant.

II. Eligibility and Highly Erodible Lands and Wetlands Compliance

In order to be eligible for an incentive payment as a part of the Partnerships for Climate-Smart Commodities, a producer must:

- Establish Farm Records with the Farm Service Agency (FSA) (have farm, tract, and field numbers in place);
- Complete an AD-2047 (Customer Data Worksheet to facilitate the collection of customer data for Business Partner Record);
- Certify highly erodible land conservation (HEL) and wetland conservation (WC) compliance via Form AD-1026, Highly Erodible Land Conservation (HELC) and Wetland Conservation (WC) Certification; and
- Certify that they are not a foreign person or entity.

Farm, tract, and field numbers are required for the producer, and ultimately the Partnerships for Climate-Smart Commodities recipient, to report climate-smart practice implementation to USDA, as well as to certify and maintain HELC/WC compliance. This will require that some producers who do not already have these numbers, like perennial crop growers or feedlots, establish these records with USDA's FSA. Farm, tract, field numbers, producer name, and Core Customer I.D. (CCID) will be provided by the recipient to the National Program Officer as a part of routine grant reporting. Recipients must ensure that producers receiving financial assistance or incentives through this project use the same name as is included in the relevant FSA Business File for that Farm ID in any contracts or similar documentation kept by the recipient.

Producers are not bound by the payment limitations and the adjusted gross income (AGI) limitations that are in place for other USDA programs.

In order to demonstrate HELC/WC compliance for Partnerships for Climate-Smart Commodities incentive payments, producers will need to request a copy of their subsidiary print from their

USDA FSA field office. The Subsidiary Print includes print year specific eligibility related information about a selected producer. The producer will then provide this documentation to the Partnerships for Climate-Smart Commodities recipients as proof of compliance. A current year subsidiary print will be required for each crop year that the producer receives a payment, and HELC/WC eligibility information is provided under the AD-1026 and Conservation Compliance sections of subsidiary (determined by year, which can change at any time during the year or in a subsequent year). As is the case already, field offices will not be expected to provide documentation to anyone besides the producer themselves (and must always comply with Section 1619 limitations if they ever do provide documentation to third parties). Producers must have control of the land for the term of their beneficiary contract.

Recipients are responsible for determining producer eligibility within the funding opportunity requirements. Recipients must inform producers of eligibility requirements and direct them to local USDA offices for requested information as necessary, including but not limited to, farm and tract establishment and Highly Erodible Land and Wetland Compliance determinations. Privacy of producers is a priority throughout this process, and recipients are responsible for maintaining producer privacy in the process.

At minimum, the recipient will collect and review subsidiary reports from participating producers. They will ensure that the producer is listed as “compliant” in all sections of the conservation compliance portion of subsidiary and “certified” for AD-1026 before an incentive payment is made. If payments to a producer span more than one Federal fiscal year, the recipient will review an updated subsidiary print each fiscal year to ensure that the status is still compliant.

III. Other Environmental and Cultural Resources Reviews

A Finding of No Significant Impact (FONSI) was signed by USDA NRCS on August 26, 2022. A copy of the Programmatic Environmental Assessment for Partnerships for Climate-Smart Commodities is available at www.usda.gov/climate-smart-commodities. USDA may determine that additional environmental and cultural resources review is needed for any particular action under Partnerships for Climate-Smart Commodities. The recipient must not execute any beneficiary contracts under this grant agreement prior to receipt of a letter from USDA that specifically details:

- 1) further procedures deemed appropriate by the Agency to ensure a completed National Environmental Policy Act (NEPA) review and all appropriate consultation requirements are met, and
- 2) additional instructions for any unanticipated discoveries or conditions.

A resolution of support is required for projects on Tribal lands from the governing body of the Tribe with jurisdiction over that land, if the applicant is not the Tribe nor an entity owned or

operated by that Tribe. USDA may approve alternative documentation for resolutions when USDA deems necessary and legally sufficient.

IV. Producer Benefits

USDA encourages the recipient to disclose to participating producers the manner and amount for which any market premiums derived from the development of the relevant climate-smart commodity will be shared between participating parties, including producers. USDA will be monitoring producer benefits, in particular those to small and underserved producers, throughout the grant period. Recipients agree that their project(s) will implement a plan for engaging small and underserved producers as laid out in this agreement.

V. Producer Data Protection and Disclosure

Recipients must ensure each producer has convenient access to any data collected from that producer or the producer's land and any associated modeling as part of the project. The recipient must provide each producer applying for benefits under this grant a description in writing of how their information, including but not limited to data about their farm and commodities, will be utilized, protected and shared as applicable.

VI. Other Data and Reporting Requirements

In addition to the reporting information provided in the statement of work and General Terms and Conditions, USDA will provide a template for the Detailed Progress Report, also known as the Partnerships for Climate-Smart Commodities (PSCS) Project Reporting Workbook. Within 30 calendar days of execution of this grant, a copy of this workbook will be posted at www.usda.gov/climate-smart-commodities or an alternative location provided to the recipient by the National Program Officer. USDA may provide updates to the PCSC Project Reporting Workbook or submission methods to streamline the data collection process and/or reduce the burden on the recipient throughout the grant period. Generally, these updates will be provided at least 3 months in advance of any required changes. The recipient must not transfer any data to foreign governments or foreign entities without prior approval from USDA.

USDA will provide a Technical Contact for this grant. The Technical Contact will have the responsibility of technical oversight for USDA for the project. The recipient is responsible for providing the technical assistance required to successfully implement and complete the project. The recipient must comply with any requests for information from the Technical Contact. The Technical Contact for this award is the National Program Officer assigned to this grant.

Prior to execution of this grant, the recipient must provide a shapefile depicting the project boundary for enrollment under this grant. Producer enrollment may not occur outside this boundary without modification of this grant.

Within 30 calendar days of execution of this grant, the recipient must provide to the National Program Officer a website address where enrollment information will be posted for producers for the project associated with this grant. Recipients will be responsible for the following reports:

- Submit quarterly performance reports that include a written progress report, as well as additional reporting on specific data elements contained in the most up-to-date version of the Partnerships for Climate-Smart Commodities Project Reporting Workbook. Additional information about each reported element is described in the Data Dictionary.
- Submit supplemental reports required to validate greenhouse gas (GHG) benefit data, including: (1) an initial project MMRV plan, (2) field-modeled GHG benefit reports, and (3) field-direct GHG measurement results, as applicable. Additional information about these reports is included in the Data Dictionary.
- Submit copies of project outputs and deliverables (e.g., fact sheets, reports) as attachments in ezFedGrants along with quarterly performance reports.
- Report the version of COMET-Planner used to estimate GHG benefits of the project within each quarterly performance report. As COMET-Planner is updated, recipients must adopt the latest version of the tool as directed by USDA for use in performance reports.

Recipients must designate an individual as a member of the USDA Partnerships for Climate-Smart Commodities Learning Network (Partnerships Network); this representative should be identified in the Project Narrative for this grant. Each project includes a plan for up to two Partnerships Network virtual meetings and two in-person meetings a year during the project duration. Dates and other details on events will be posted at www.usda.gov/climate-smart-commodities or an alternative location provided to the recipient by the National Program Officer.

The Partnerships Network will be co-chaired by representative from the USDA Office of the Chief Economist and the Farm Production and Conservation Mission Area. The Partnerships Network will inform synthesis reports to be assembled by USDA on a range of topics related to the implementation of Partnerships for Climate-Smart Commodities projects, including:

- Lessons-learned as projects are implemented;
- Options for providing technical assistance;
- Procedures for measurement/quantification, monitoring, reporting, and verifying GHG benefits;
- Options for tracing climate-smart commodities through the supply chain;
- Mechanisms for reducing costs of implementation;
- A forum for discussion and learning regarding approaches to climate-smart agriculture and forestry implementation (including but not limited to deployment and

measurement/quantification, monitoring, reporting, tracking, and verification of associated greenhouse gas benefits and marketing of climate-smart commodities).

- Synthesis of outcomes; and
- Opportunities for USDA and others to inform future approaches to generating new and expanded markets for climate-smart commodities.

The Partnerships Network topics to be discussed will cover at minimum the areas described in previous FAQs and will evolve with USDA's ongoing project data analysis efforts and with input from the project recipients on the kinds of sessions that will be most helpful to them in building the diverse climate-smart markets associated with their projects. Participation may include at least one interview a year and include questions related to the following areas:

- Technical assistance approaches, methods, and successes and/or challenges
- Producer outreach approaches, methods, and successes and/or challenges
- Monitoring, measurement, reporting, and verification (MMRV) approaches, methods, and successes and/or challenges
- Marketing approaches, methods, and successes and/or challenges
- Partnership approaches, methods, and successes and/or challenges
- Data collection and storage approaches, methods, and successes and/or challenges
- Supply chain approaches, methods and successes and/or challenges, including approaches to traceability
- Supply chain benefits and demand for climate-smart commodities
- Perspectives on program design, climate-smart commodity definitions, and future approaches or opportunities
- Project successes and stories

USDA may also request producer exit reports at a later date. Additional marketing and branding-related requirements may be provided by USDA, including signage related to Partnerships for Climate-Smart Commodities.

VII. Competition and Anti-Competitive Practices

In connection with this grant, recipients may not prohibit or otherwise limit a producer from changing the provider of other services or materials not included as part of this grant.

Recipients may not condition, limit, steer, or discriminate in their provision or sale of non-project business functions or products to producers based on their participation or non-participation in or use of any services provided as part of this grant. Additionally, funds in this agreement shall not be used for purposes or activities related to mergers or acquisitions.

VIII. Suspension and Disbarment

The provisions governing Suspension and Disbarment in subsection 1.a.8 shall also apply to fraud, embezzlement, theft, forgery, bribery, falsification, or destruction of records, making false statements, or violations of the Federal civil antitrust or unfair trade practice laws.

IX. Special provisions for awards to for-profit entities as recipients

This section contains provisions that apply to awards to for-profit entities. These provisions are in addition to other applicable provisions of these terms and conditions, or they make exceptions from other provisions of the terms and conditions for awards to for-profit entities. For-profit entities that receive awards have two options regarding audits:

- 1) A financial related audit of a particular award in accordance with Generally Accepted Government Auditing Standards issued by the Comptroller General of the United States, in those cases where the for-profit entity receives awards under only one USDA program; or, if awards are received under multiple USDA programs, a financial related audit of all awards in accordance with Generally Accepted Government Auditing Standards issued by the Comptroller General of the United States; or
- 2) An audit that meets the requirements contained in 2 CFR 200 subpart F.

For-profit entities that receive annual awards totaling less than the audit requirement threshold in 2 CFR 200 subpart F are exempt from USDA audit requirements for that year, but records must be available for review by appropriate officials of Federal agencies or the Government Accountability Office.

X. Non-Disparagement

Recipients may not engage in any advertising deemed by USDA as disparaging to another agricultural commodity or competing product, or in violation of the prohibition against false and misleading advertising. Disparagement is defined as anything that depicts other commodities in a negative or unpleasant light via overt or subjective video, photography, or statements. Comparative advertising is allowable, provided the presentation of facts is truthful, objective, not misleading, and supported by a reasonable basis.
